试题集

题目 1 - Section 1, Module 1: Reading and Writing (unknown)

What is a city? The answer depends on where you live! Many countries define an area as a city based on how many people live there. However, not every country uses the same numbers. Albania defines a city as an area with a population of at least 400, while Italy defines a city as having a minimum population of 10,000. Some countries even define cities using other factors, like the number of buildings in the area.

Which choice best states the function of the underlined sentence in the text as a whole?

A It asks a question that is answered throughout the rest of the text.

B It provides examples that illustrate the point made in the previous sentence.

C It presents a quotation from an expert that is discussed later in the text.

D It portrays an event that is described in greater detail in the sentence that follows.

题目 6 - Section 1, Module 1: Reading and Writing (unknown)

The *Beaumaris Castle* is just one of approximately three million known historical shipwrecks spread throughout the world's oceans, and their impact on underwater life and ecosystems is of great interest to researchers. Rachel Mugge and colleagues were particularly curious about the effects of wooden shipwrecks on three different seafloor microbial communities: bacteria, archaea, and fungi. The researchers studied two wooden shipwrecks in the Gulf of Mexico by placing pieces of pine and oak between zero and 200 meters away from each shipwreck to collect samples of microbes. They found that wood type had a much more significant influence on bacterial community composition than on archaeal or fungal community composition.

Which choice best states the main purpose of the text?

A To provide an overview of a study about the effects of wooden shipwrecks on seafloor microbial communities

B To detail the composition of the *Beaumaris Castle*

C To argue that wooden shipwrecks affect fish more than they do microbial communities

D To describe how the first shipwreck in the Gulf of Mexico was discovered

正确答案: A

题目 7 - Section 1, Module 1: Reading and Writing (unknown)

The following text is adapted from María Amparo Ruiz de Burton's 1885 novel *The Squatter and the Don*. Mercedes and Clarence, who develop a romantic relationship in the novel, have been traveling with a group of friends.

> [Mercedes] was still very pale, and her hands yet trembled, when the thundering of the east-bound train was heard in the distance. Two shrieks pierced the air simultaneously, as the two trains passed each other. Her heart gave accelerated throbs when she heard those shrieks, because she knew that one of them came from the train which bore Clarence away, and it seemed to her as if expressive of his pain at being torn from her. Yes, that magician, the locomotive, understood it all, and shrieked to say he did so, because he knew she, too, wished to shriek like that.

Which choice best states the main idea of the text?

A Mercedes feels heartbroken to be separated from Clarence.

B The sounds at the train station irritate Mercedes.

C Clarence does not enjoy traveling by train.

D Mercedes is not aware of where Clarence is traveling to.

题目 8 - Section 1, Module 1: Reading and Writing (unknown)

In 1958, Jim Dine and several other emerging artists founded the Judson Gallery in New York City, a nurturing space where artists produced and exhibited works that were radically new at the time—from assemblages (mixed-media pieces with found objects) to "Happenings" (performance art experiences designed to be irreplicable). The gallery is still remembered for its links to artists who helped drive experimental movements, such as the pop artist Red Grooms, and for the remarkable freedom it ofered artists in their explorations.

Which choice best describes the purpose of the underlined portion in the text as a whole?

A To clarify why assemblages and "Happenings" were considered groundbreaking types of art in 1958

B To shift the discussion to two types of art that were associated with the pop art movement

C To illustrate that the Judson Gallery shifted from exhibiting traditional artworks to experimental ones

D To give examples of unconventional types of art that were featured at the Judson Gallery

正确答案: D

题目 9 - Section 1, Module 1: Reading and Writing (unknown)

Conduit Type, P_{12}, and Slope for Five New Caledonian Woody Species

Species	Conduit type	P_{12} (megapascal)	Slope (% megapascal^{-1})
Zygogynum crassifolium	tracheid	−3.6	125.8
Zygogynum acsmithii	tracheid	−2.4	173.0
Ascarina rubricaulis	vessel	−1.6	97.5
Paracryphia alticola	vessel	−0.8	40.2
Cryptocarya aristata	vessel	−0.8	43.9

The formation of embolisms (air bubbles) in plant xylem (water-conducting tissue) is a significant contributor to vulnerability to water stress. Some researchers have hypothesized that the evolution of vessels, a conduit type thought to provide greater water transport efficiency than do tracheids, in xylem represents a trade-of between water-stress tolerance and transport efficiency. To evaluate the hypothesis, Santiago Trueba et al. studied initial embolism formation (P_{12}, the pressure at which 12% of hydraulic conductivity is lost due to embolisms, where lower values indicate greater resistance to embolisms) and the rate at which embolisms propagate (measured by slope, where greater values indicate faster propagation) in New Caledonian woody species.

Assuming the data in the table are broadly representative of species included in the study, to what extent do the data support the hypothesis about the evolution of vessels presented in the text?

www.dsatuz.com

A Compared with vessel species, tracheid species tend to be less resistant to initial embolism formation but more resistant to embolism spread; the hypothesis is therefore only partly supported.

B Compared with vessel species, tracheid species tend to be more resistant to initial embolism formation but less resistant to embolism spread; the hypothesis is therefore strongly supported.

C Compared with tracheid species, vessel species tend to be less resistant to initial embolism formation but more resistant to embolism spread; the hypothesis is therefore only partly supported.

D Compared with tracheid species, vessel species tend to be less resistant to both initial embolism formation and embolism spread; the hypothesis is therefore strongly supported.

题目 10 - Section 1, Module 1: Reading and Writing (unknown)

Brown Bears in Katmai National Park, Alaska

Bear identification number	Sex	Age (years)	Approximate weight (pounds)
137	male	15	950
178	female	17	450
125	male	8	500
162	male	5	400

Scientists collected information about brown bears in Katmai National Park in Alaska. This information included each bear's sex, age, and approximate weight. For the bear with identification number 162, for example, the scientists recorded that the bear was _____blank

Which choice most efectively uses data from the table to complete the statement?

A female, 17 years old, and weighed approximately 450 pounds.

B male, 5 years old, and weighed approximately 400 pounds.

C male, 8 years old, and weighed approximately 500 pounds.

D male, 15 years old, and weighed approximately 950 pounds.

题目 11 - Section 1, Module 1: Reading and Writing (unknown)

Claudine at School is a 1900 novel by Colette, originally written in French. The narrator is a fifteen-year-old girl living in a small, rural town in the midst of forests. When talking about her surroundings, she sometimes attributes human motivations to the natural world, as when she describes _____blank

Which quotation from a translation of *Claudine at School* most efectively illustrates the claim?

A "timid deer who run so fast that you can only guess their passage."

B "[a snake] with its head raised and its little golden eyes staring at me."

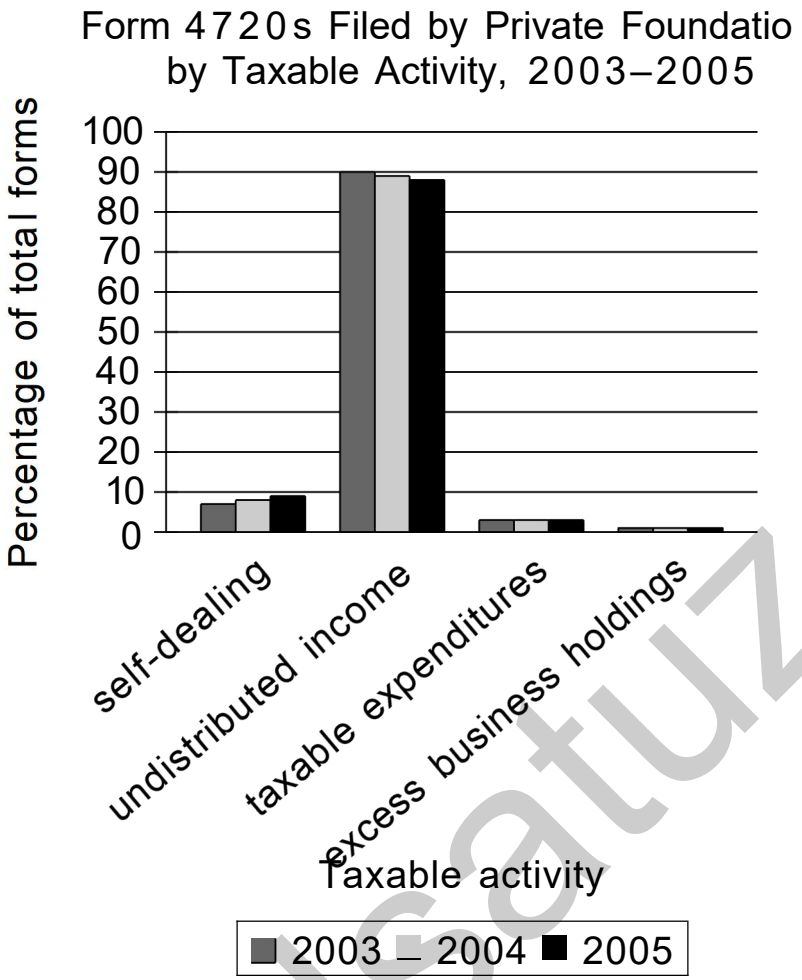

C "the copses, where bushes spitefully catch your face as you pass."

D "a smooth, deep lake, enclosed on all sides by the woods."

题目 12 - Section 1, Module 1: Reading and Writing (unknown)

- For each data category, the following bars are shown:
  - 2003
  - 2004
  - 2005
- The data for the 4 categories are as follows:
  - self-dealing:
    - 2003: 7%
    - 2004: 8%
    - 2005: 9%
  - undistributed income:
    - 2003: 90%
    - 2004: 89%
    - 2005: 88%
  - taxable expenditures:

- 2003: 3%
- 2004: 3%
- 2005: 3%

- excess business holdings:
  - 2003: 1%
  - 2004: 1%
  - 2005: 1%

While US public charities, like Commonfund, must file Form 990 yearly with the IRS, private foundations, such as the David and Lucile Packard Foundation, must file a different form, 990-PF. In addition, foundations that engage in certain prohibited activities must also file Form 4720 and pay a penalty tax on the money involved. Private foundations are prohibited from holding excess interests in a business enterprise, "self-dealing" (conducting activities that benefit foundation insiders), making taxable expenditures such as outlays for lobbying, and failing to cross a required threshold in making charitable distributions from income. Out of the organizations that filed Form 990-PF in the years 2003–2005, _____blank

Which choice most efectively uses data from the graph to complete the assertion?

A a greater percentage of those that also filed Form 4720 did so because they engaged in self-dealing than the percentage of those that filed Form 4720 because they did not meet the minimum charitable distribution requirement.

B those that were also required to file Form 4720 were more likely to do so because they did not meet the minimum charitable distribution requirement than for other reasons.

C more of those that also filed Form 4720 failed to meet a minimum charitable distribution requirement than did those organizations that filed Form 990 but also filed Form 4720 for the same reason.

www.dsatuz.com

D those that were also required to file Form 4720 because they had excess holdings in a business enterprise paid, on average, a significantly smaller penalty than those organizations that filed Form 4720 because they made taxable expenditures.

题目 13 - Section 1, Module 1: Reading and Writing (unknown)

Rafael Núñez and colleagues studied how members of the Yupno, an Indigenous group in Papua New Guinea, conceptualize time. The researchers recorded Yupno speakers explaining certain temporal words and phrases, such as *apma bilak*, a past-oriented expression that translates to "last year," and coded each speaker's manual gestures. Previous research has found a tendency in many cultures to make temporal distinctions using spatial concepts and gestures, particularly along egocentric axes (i.e., relative to the orientation of the speaker): for instance, Hebrew speakers often refer to the right/left axis to describe events in time. In an anthropology paper, a student claims that the tendency toward ego-based conceptualizations of time is universal.

Which finding, if true, would most directly weaken the student's claim?

A A Yupno speaker using gestures to refer to a past event points in the same geographical direction regardless of which direction the speaker faces.

B Although Yupno speakers and Hebrew speakers both use gestures to indicate orientation in time, Yupno speakers tend to use fewer gestures overall when speaking than Hebrew speakers do.

C Some Yupno grammatical structures used when talking about time are also used in Hebrew.

D A Yupno speaker points in opposite directions when indicating a past event versus a future event.

题目 14 - Section 1, Module 1: Reading and Writing (unknown)

Research into whether floating mats of macroalgae affect the prevalence of microphytobenthos (MPB)—benthic, or bottom-dwelling, microalgae—has produced varying results: Lauri Green and Peggy Fong determined that macroalgae do not impact MPB, whereas Alfonso Corzo and colleagues observed that benthic chlorophyll concentrations (a common measure of MPB biomass) increased in the presence of macroalgae. Hypothesizing that macroalgal mats have a negative effect on MPB biomass, Alice F. Besterman and Michael L. Pace surveyed mudflats near Cobb Island and other coastal sites in Virginia. Because Besterman and Pace did not find a significant correlation between benthic chlorophyll concentrations and the abundance of macroalgal mats, it can be concluded that _____blank

Which choice most logically completes the text?

A rather than inhibiting chlorophyll production in MPB, as they had hypothesized, macroalgal mats may positively affect chlorophyll production.

B differences between their study design and that of Corzo and colleagues likely explain the discrepancy in the two studies' findings about the responses of MPB to macroalgal mats.

C their hypothesis about the relationship between macroalgae and MPB was not supported and their finding was instead consistent with that of Green and Fong.

D although this finding was consistent with that of Corzo and colleagues, trends in MPB biomass are likely not a result of stresses caused by macroalgae.

题目 16 - Section 1, Module 1: Reading and Writing (unknown)

There are over 150 species of the cactus genus *Mammillaria* throughout the Americas, but their survival can be threatened by high precipitation and dense vegetation that blocks sunlight. Researchers have located species from the genus in almost every state in Mexico, with several of them, like *M. aureilanata*, restricted to only one state. The fact that the genus has not been observed in eastern Chihuahua has been attributed to a lack of appropriate habitat, but much of the landscape in this area is notoriously difficult to explore, which suggests that _____blank

Which choice most logically completes the text?

A future collection efforts may uncover the presence of *Mammillaria* species in eastern Chihuahua.

B the current methods of collecting and tracking *Mammillaria* species throughout Mexico may cause an overestimation of the number of species in this genus.

C the dense vegetation and high annual precipitation levels in eastern Chihuahua impede the ability of *Mammillaria* species to survive.

D *M. aureilanata* may have been overlooked in eastern Chihuahua because of its similarity to another species.

题目 32 - Section 1, Module 1: Reading and Writing (unknown)

Fossil evidence indicates that the End-Cretaceous mass extinction—the relatively sudden die-of of about 75 percent of species (including many species of mosasaurs)—occurred approximately 66 million years ago. Researchers have identified the effects of volcanic activity as a possible initial cause of this mass extinction. But mass extinctions, while abrupt in geological terms, unfold over thousands or millions of years: it's likely that multiple factors drove extensive species loss.

Which choice best states the function of the underlined portion in the text as a whole?

A It offers support for an earlier claim about the primary cause of a mass extinction that is then qualified by the information that follows.

B It concedes that the pace of mass extinctions as described in the information that follows is perceived differently when considered from another point of view.

C It emphasizes that a question about the beginning of a mass extinction raised by the researchers mentioned earlier is still unresolved.

D It expands on the uncertainty mentioned earlier regarding the pace of extinction of species of mosasaurs relative to that of other species.

题目 33 - Section 1, Module 1: Reading and Writing (unknown)

The Willa Cather Childhood Home in Red Cloud, Nebraska, is the house where Willa Cather lived for five years and where she drew inspiration for her novels. Now the house is a museum dedicated to Cather's life and writings. It's likely obvious why fans of Cather's works would choose to visit the museum. However, its curators also want to appeal to visitors who aren't already familiar with Cather. Guided tours and special events, such as plays based on Cather's books, are therefore important, since they help visitors find enjoyment in Cather's works.

Based on the text, what is a benefit of visiting the Willa Cather Childhood Home?

A It is near other museums dedicated to local history.

B It includes exhibits on several important American writers.

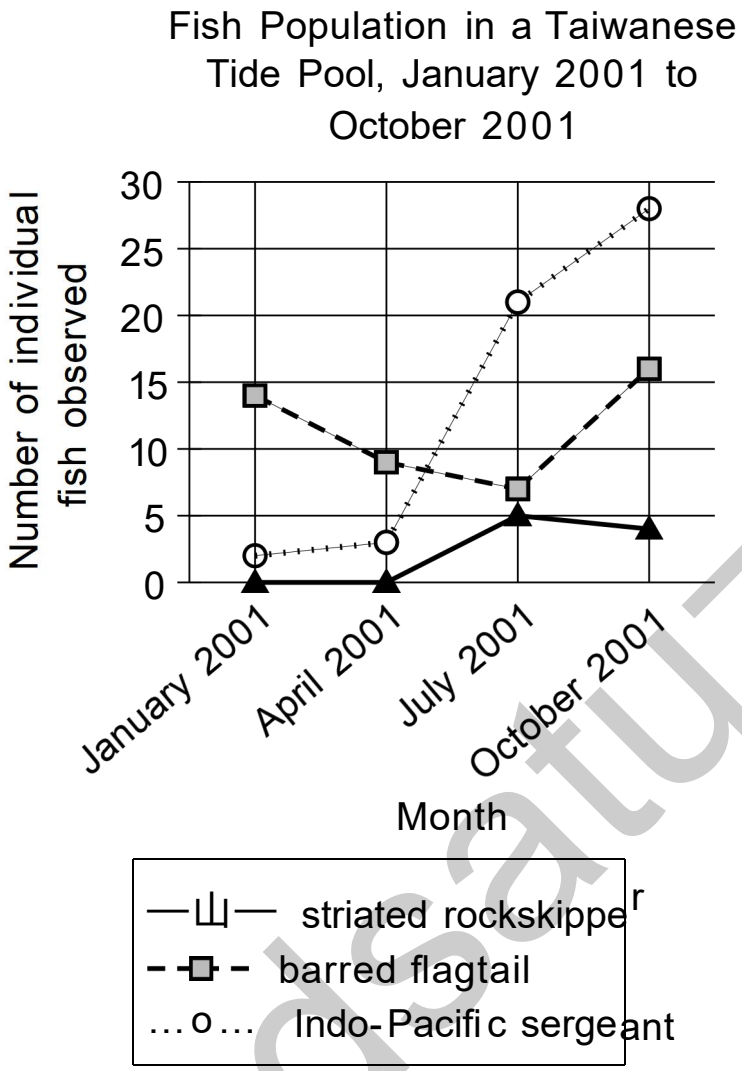

C It helps visitors to appreciate Cather's works.

D It is superior to most museums dedicated to Cather's life.

题目 35 - Section 1, Module 1: Reading and Writing (unknown)

Composition and Fracture Toughness of Five HEAs

HEA identification number	Composition (%)	Fracture toughness (megapascals times the square root of crack length)
146	aluminum (7), cobalt (28.67), iron (28.67), nickel (28.67), titanium (7)	239.00
54	chromium (10), cobalt (20), iron (45), nickel (15), vanadium (10)	219.00
76	carbon (11.21), chromium (31.21), cobalt (14.39), iron (14.39), manganese (14.39), nickel (14.39)	26.20
53	molybdenum (25), niobium (25), tantalum (25), tungsten (25)	2.90
104	cobalt (20), chromium (20), iron (20), manganese (20), titanium (20)	2.44

Composition values may not add up to 100 due to rounding.

High-entropy alloys (HEAs) have been observed to have greater fracture toughness—greater resistance to crack propagation—than conventional alloys. It has been proposed that regardless of other factors, fracture toughness should increase with the proportion of an HEA consisting of cobalt, but data on HEAs compiled by engineer Xuesong Fan suggest that this may not be the case; for example, _____blank

www.dsatuz.com

Which choice most efectively uses data from the table to complete the text?

A cobalt constitutes the same proportion of HEA 54 as it does of HEA 104.

B cobalt constitutes a higher proportion of HEA 146 than it does of HEA 54.

C cobalt constitutes a diferent proportion of HEA 76 than it does of HEA 54.

D cobalt constitutes a substantial proportion of HEA 146 but does not constitute any of HEA 53.

题目 36 - Section 1, Module 1: Reading and Writing (unknown)

Psychologists Gregory Bryant, Dorsa Amir, and colleagues investigated cross-cultural perceptions of spontaneous (real) laughter and volitional (fake or forced) laughter. Study participants from 21 societies, including those in Japan and South Africa, listened to randomized recordings of 18 spontaneous laughs taken from natural conversations between pairs of women and 18 volitional laughs produced separately by 18 different women in response to an instruction to laugh. Analysis of the participants' evaluations of the laughs prompted the team to conclude that the ability to distinguish between spontaneous and volitional laughter appears to be universal across cultures.

Which potential finding from the team's study, if true, would most directly support the team's conclusion?

A The overall rate of correct judgments by participants was 64%, substantially better than chance, and spontaneous and volitional laughs were recognized at similar rates in Japan, South Africa, and the other societies in the study.

B Acoustic features of spontaneous laughter, such as pitch and intensity, have measurable variations both within and across societies.

C A variety of people from Japan and South Africa evaluated the recordings in the study, and no significant differences in listeners' judgments of laughter types were found.

D An assessment of the effect of demographic variables on judgments of laughter type in Japan, South Africa, and the other societies in the study revealed that participants' evaluations were correlated with the economic conditions of the societies in which participants live.

题目 37 - Section 1, Module 1: Reading and Writing (unknown)

Blue holes—large marine sinkholes, like the Great Blue Hole near Belize—can be hundreds of meters deep and are sometimes part of widespread subterranean networks of passageways. In 2021, researchers conducted the first formal study of the Taam Ja' Blue Hole (TJBH), located in a bay of fresh water and salt water on Mexico's coast, and reported a maximum depth of 274 meters. Laura Carrillo and colleagues later reinvestigated the depth of the TJBH, determining that it exceeded 400 meters; additionally, they detected variations in characteristics across water layers. Layers more than 400 meters deep began to show density and salinity conditions akin to those of the nearby Caribbean Sea. Carrillo and colleagues therefore suggest that _____blank

Which choice most logically completes the text?

A the apparent relationship between depth and salinity level in the TJBH is the inverse of that found in the Caribbean Sea.

B in the TJBH, there are greater differences between water layers less than 275 meters deep than there are between water layers greater than 400 meters deep.

C there may be tunnels and caves that connect the TJBH and the waters of the Caribbean deep underground.

D researchers should reevaluate existing measurements of the depths of the Great Blue Hole and other blue holes where the conditions in very deep waters are similar to those of waters in open seas.

题目 53 - Section 1, Module 1: Reading and Writing (unknown)

The oha wai shrub is one of many forest plant species native to Oahu (a Hawaiian island) that are at risk of extinction in the wild. Ecologists say that fruit-eating birds help support these species' population numbers by dropping seeds from the plants' fruits to different spots where new plants can grow. The birds native to Oahu that used to do this have all gone extinct over time. However, the red-crested cardinal and other fruit-eating bird species brought to the island in the last 150 years have been found to spread plant seeds. Based on this finding, some ecologists suggest that oha wai shrubs and other forest plants native to Oahu _____blank

Which choice most logically completes the text?

A were likely already close to extinction long before non-native birds arrived on the island.

B may now depend on non-native birds, such as the red-crested cardinal, to help maintain and increase their populations on the island.

C seem to produce fewer fruits per plant now than they did when fruit-eating birds native to the island were still present.

D probably established themselves on the island at about the same time as red-crested cardinals and other fruit-eating birds did.

题目 65 - Section 1, Module 1: Reading and Writing (unknown)

Seasonal Variation in U-238 Concentration in Gahai Lake and Tuosu Lake

Sample ID	Sampling location	U-238 (µg/L)	Season
GH-2	Gahai Lake	18.3	winter
GH-6	Gahai Lake	16.2	summer
TS-4	Tuosu Lake	35.5	winter
TS-5	Tuosu Lake	34.4	summer

In a 2015 study, Akihito Mochizuki et al. determined that aqueous concentration of the element uranium (U) in Lake Biwa, Japan, varies nearly threefold from winter to summer. Such fluctuations in lakes are driven primarily by (and are reliably indicative of) variations in lakes' pH levels. On the basis of the findings of Mochizuki et al., a student analyzing data on concentrations of U-238, an isotope that accounts for more than 99% of all naturally occurring U, in water samples from two Chinese lakes—Gahai Lake and Tuosu Lake—hypothesizes that relative to these two lakes, Lake Biwa experiences greater seasonal variation in pH levels.

Based on the text and the table, is the student's conclusion reasonable?

A No, because the data reveal different ranges of seasonal variation in U-238 concentrations between the sampled lakes, with the samples from Gahai Lake ranging from 16.2 µg/L to 18.3 µg/L and the samples from Tuosu Lake ranging from 34.4 µg/L to 35.5 µg/L

www.dsatuz.com

B Yes, because the data show that the U-238 concentrations in the samples from Gahai Lake and Tuosu Lake remain relatively stable, increasing only from 16.2 µg/L to 18.3 µg/L and 34.4 µg/L to 35.5 µg/L, respectively, from summer to winter

C Yes, because the data indicate that the difference between the U-238 concentrations in the Gahai Lake samples and those in the Tuosu Lake samples remains nearly constant from summer to winter

D No, because the data show only U-238 concentrations and not pH levels in the Gahai Lake and Tuosu Lake samples, making it impossible to draw inferences about variation in pH levels in those lakes

The following text is from Louise Erdrich's 1986 novel *The Beet Queen*. Celestine takes her infant daughter with her to the butcher shop where she makes sausages.

> Sometimes Celestine turned around and met the direct gaze of her daughter, a look so penetrating that Celestine's breath caught. She dropped the spice, the string, the knife she was using, and took the girl up in her arms, ready for her to speak as if a spell had suddenly lifted.
>
> When the baby fiexed her entire body and struggled to free herself, Celestine put her down. No matter how thorough Celestine's exhaustion, no matter how little sleep she'd had, there was a nerve of excitement running through each hour.

©1986 by Louise Erdrich

Which choice best states the main purpose of the text?

A To indicate that Celestine is considering a new career

B To show that Celestine enjoys imagining her daughter's future life

C To portray Celestine's excitement about her daughter

D To consider how Celestine's coworkers feel about her daughter

正确答案: C

题目 74 - Section 1, Module 2: Reading and Writing (easy)

Based in New York City, Cetiliztli Nauhcampa is among the many US-based groups specializing in Danza Mexica. This dance form originated in the 1500s, when the Otomi and other tribes in Central Mexico began sharing and combining their dances to create a hybrid form. Since that time, Danza Mexica has evolved stylistically and spread well beyond its place of origin to the rest of Mexico, then later to Mexican communities in the US. Yet even today, Otomi influences can be seen in the performances of Cetiliztli Nauhcampa.

Which choice best states the function of the underlined sentence?

A It emphasizes just how well documented the history of Danza Mexica is.

B It outlines how Danza Mexica has changed since it arose in the 1500s.

C It notes a difference between Danza Mexica and other dance forms that originated in Mexico.

D It suggests basic similarities between Danza Mexica and Otomi dances.

题目 75 - Section 1, Module 2: Reading and Writing (easy)

Text 1

Vernacular art, also known as folk art, refers to works by artists without extensive training who work outside the mainstream art world. In the last few decades, the Smithsonian American Art Museum in Washington, DC, and similar cultural institutions have worked to bring vernacular art out of obscurity. As a result, Clementine Hunter's piece *Melrose Quilt* can now be experienced by art lovers.

Text 2

Special exhibits and similar efforts by cultural institutions to promote vernacular artists often inadvertently uphold misleading distinctions between these artists and the creators of so-called "high" art. Artists regularly gain inspiration from each other: vernacular artists often reveal a familiarity with prevailing trends through their works, and more mainstream artists in turn often credit vernacular works as important influences.

Based on the texts, how would the author of Text 2 most likely respond to the author of Text 1's characterization of vernacular artists?

A By agreeing with the author of Text 1 that some of the terms used to describe vernacular artists may be misleading

B By questioning the argument made in Text 1 that the general public will readily embrace works by vernacular artists as those works are brought to greater attention

C By challenging the idea advanced in Text 1 that mainstream cultural institutions are suitable venues for adequately honoring vernacular artists

www.dsatuz.com

D By suggesting that the author of Text 1 may be overstating the extent to which vernacular artists have been detached from the mainstream art world

正确答案: D

题目 76 - Section 1, Module 2: Reading and Writing (easy)

The Willa Cather Childhood Home in Red Cloud, Nebraska, is the house where Willa Cather lived for five years and where she drew inspiration for her novels. Now the house is a museum dedicated to Cather's life and writings. It's likely obvious why fans of Cather's works would choose to visit the museum. However, its curators also want to appeal to visitors who aren't already familiar with Cather. Guided tours and special events, such as plays based on Cather's books, are therefore important, since they help visitors find enjoyment in Cather's works.

Based on the text, what is a benefit of visiting the Willa Cather Childhood Home?

A It is near other museums dedicated to local history.

B It includes exhibits on several important American writers.

C It is superior to most museums dedicated to Cather's life.

D It helps visitors to appreciate Cather's works.

题目 77 - Section 1, Module 2: Reading and Writing (easy)

Like all of Dolly Parton's early solo albums, *I Will Always Love You* from 1974 consists of country songs whose structures and subject matter are grounded in the traditional folk ballads of the southern United States, where she was born and raised. In the late 1970s and the first half of the 1980s, Dolly incorporated pop music into her work, recording "Two Doors Down" and other commercially successful songs. Yet she continued to be regarded as a country artist thanks to her cultural associations with the rural South—the region that gave birth to both country music and its precursor, the ballad tradition.

Which statement about Dolly as a musician is best supported by the text?

A She grew up knowing few Southern folk ballads, despite having been raised in the rural South.

B Her commercial success declined because of pop-influenced recordings like "Two Doors Down."

C She was still considered a country artist even when her recordings featured elements of pop music.

D Her album *I Will Always Love You* features her first exploration of pop music.

题目 78 - Section 1, Module 2: Reading and Writing (easy)

Mining drills and many other widely used mechanical systems have moving parts that rub or slide against one another, creating friction. This friction increases energy consumption and causes wear, which decreases the stability and life span of the system. Using carbon nanotubes and oil, Chanaka Kumara and colleagues at a US Department of Energy lab have created a coating for moving parts that reduces friction to the point where it is almost nonexistent. The new coating is suitable for common applications, unlike other approaches that require special conditions.

What does the text most strongly suggest about the coating created by Kumara and colleagues?

A It is unlikely to be widely used because it can be applied only under special conditions.

B It can likely improve the energy consumption of certain mechanical systems but not of mining drills.

C It is unlikely to reduce wear in mechanical systems that have multiple moving parts.

D It can likely be used to reduce energy consumption and wear in mining drills and other common mechanical systems.

题目 82 - Section 1, Module 2: Reading and Writing (easy)

Right-handedness is overwhelmingly prevalent in humans. Among studies of laterality in nonhuman primates, Lesley J. Rogers and Gisela Kaplan's 1995 study of wild orangutans reported no tendency toward right-handedness, while James Welles's 1976 study of captive chimpanzees and catarrhine monkeys did. However, the latter study included only 10 individuals, and a meta-analysis of primate-laterality studies demonstrated that a minimum sample size of 176 individuals is required to be confident that a finding of population-level handedness is not mere statistical noise. The claim of right-handedness in the 1976 study should therefore be treated skeptically given that _____blank

Which choice most logically completes the text?

A the apparent difference between the two studies' results may be partly attributable to the 1976 study using a different standard to determine handedness than the 1995 study did.

B right-handedness does not occur frequently enough among chimpanzees and catarrhine monkeys to reliably appear in a sample of only 10 individuals.

C the sample size on which the claim is based is far below the threshold identified in the meta-analysis.

D the study that did not find right-handedness in orangutans was also based on an insufficient population size.

题目 93 - Section 1, Module 2: Reading and Writing (easy)

While researching a topic, a student has taken the following notes:

- The writer Effie Lee Newsome published the poem "The Bird in the Cage" (1927) in *The Crisis*.
- The writer Countee Cullen published the poem "Night Rain" (1925) in *The Crisis*.
- *The Crisis* is an influential Black literary magazine.

The student wants to emphasize a similarity between Newsome and Cullen. Which choice most efectively uses relevant information from the notes to accomplish this goal?

A Both Newsome and Cullen published poems in *The Crisis*.

B *The Crisis*, an influential Black literary magazine, has published poetry.

C Cullen published a poem called "Night Rain" in 1925.

D A poem called "The Bird in the Cage" was published in 1927.

正确答案: A

题目 94 - Section 1, Module 2: Reading and Writing (easy)

While researching a topic, a student has taken the following notes:

- Conrad II was crowned emperor of the Holy Roman Empire (HRE) by Roman Catholic Pope John XIX on March 26, 1027.
- Conrad II conquered the Kingdom of Burgundy for the HRE.
- Frederick III was crowned emperor of the HRE by Pope Nicholas V on March 19, 1452.
- Frederick III reigned as Holy Roman emperor for over 50 years.
- Scholar Charles Lockett: The HRE's "history was characterized by a constant interface with the Roman Catholic Church."
- Lockett: "Much of [the HRE's] history was intimately concerned with the struggle over Papal authority and legitimacy."

The student wants to use historical evidence and a quotation from Lockett to analyze the relationship between the HRE and the Roman Catholic Church. Which choice most efectively uses relevant information from the notes to accomplish this goal?

A That emperors Conrad II and Frederick III were both crowned by Roman Catholic popes suggests that the HRE and the church maintained close ties despite "the struggle over Papal authority and legitimacy" Lockett highlights.

B The contrast between Conrad II and Frederick III, who reigned as Holy Roman emperor for over 50 years, supports Lockett's analysis of the relationship between the HRE and the church, specifically its "struggle over Papal authority and legitimacy."

C As historical evidence shows, from the day he became emperor—March 19, 1452—Frederick III resisted what Lockett referred to as the HRE's "constant interface with the Roman Catholic Church."

D According to Lockett, the HRE's "constant interface with the Roman Catholic Church" was exemplified by Conrad II, who conquered the Kingdom of Burgundy for the HRE.

题目 101 - Section 1, Module 2: Reading and Writing (easy)

Text 1

Economist Thomas Piketty's book *Capital in the Twenty-First Century* has a more rigorous structure than its sequel, *Capital and Ideology*. While the first book's chapters all contribute to bolstering a clear, coherent argument about income inequality, the second book's digressions on subjects such as the various constitutions of France do not just unduly lengthen the book but also muddy its reasoning.

Text 2

Capital and Ideology has different aims than Piketty's earlier books. It should be judged not just in the context of Piketty's previous work but placed next to books like William T. Vollmann's *Rising Up and Rising Down*, in which the stated theme of justifications for violent acts is mainly an excuse for a polymath to map his own mind. Even when sections do not explicitly support the central thesis, they link to each other in intriguing ways. None of them should be considered extraneous.

Based on the texts, how would the author of Text 2 most likely respond to the underlined statement in Text 1?

A By arguing that the structure of *Capital and Ideology* is a principal reason why it is a superior book to *Rising Up and Rising Down*

B By agreeing that the material in *Capital and Ideology* on French constitutions has a relevance to the central thesis that is not apparent until one has read the entire book

C By stating that even if Piketty is an economist, there is no justifiable reason why *Capital and Ideology* should not be compared to the work of William T. Vollmann

D By saying that the inclusion of the material on French constitutions is not purposeless, even if it does not support the main argument of *Capital and Ideology*

题目 114 - Section 1, Module 2: Reading and Writing (easy)

While researching a topic, a student has taken the following notes:

- Elizabeth Catlett (1915–2012) was a celebrated African American artist.
- She is best known for creating sculptures and prints that explore the Black experience.
- *Face* is a 1973 marble sculpture by Catlett.
- *The Immortal* is a 1994 bronze sculpture by Catlett.

The student wants to introduce Elizabeth Catlett to an audience unfamiliar with the artist. Which choice most efectively uses relevant information from the notes to accomplish this goal?

A The sculpture *Face* was made in 1973, and the sculpture *The Immortal* was made in 1994.

B *Face* is a marble sculpture that was created in 1973.

C In contrast to the 1973 sculpture *Face*, which is made of marble, the 1994 sculpture *The Immortal* is made of bronze.

D Elizabeth Catlett, a celebrated African American artist, is best known for creating sculptures and prints that explore the Black experience.

题目 117 - Section 1, Module 2: Reading and Writing (easy)

Text 1

Norse settlers occupied part of Greenland from about 985 CE until the early 15th century, when they mysteriously abandoned the region. Many researchers cite increasingly lower temperatures to explain why the Norse fled. The researchers reason that the Norse settlers arrived in the region while the climate was warm and were able to remain there until temperatures declined during the Little Ice Age, which occurred between the 14th and 19th centuries.

Text 2

Jeffrey Salacup, Boyang Zhao, and colleagues analyzed sediment samples from a lake in Greenland close to the Norse settlement. This allowed them to reconstruct the area's climate history. The researchers found no evidence of substantial temperature changes during the settlement period. They argue that instead the region experienced a persistent drought, which played a more important role in forcing the Norse out of the area than did increasingly lower temperatures.

Both texts discuss research on which topic?

A The causes of the Little Ice Age

B The first artifacts found at a Norse settlement

C The history of drought in Greenland

D The abandonment of the Norse settlement in Greenland

题目 120 - Section 1, Module 2: Reading and Writing (easy)

Most Native languages belong to language families, or groups of languages whose similarities in vocabulary and grammar suggest shared descent from a single language spoken long ago. In contrast, the language spoken by the Salinan people in a mountainous area of Central California was an isolate, or a language with no demonstrated relationship to other languages. Atakapa, another isolate, was spoken in a comparatively swampy area of Louisiana and southeastern Texas. One linguist has proposed that such languages are more prevalent in mountainous regions or coastal wetlands and swamps because such challenging terrain inhibits the geographical expansion of language families.

Which finding, if true, would most directly support the linguist's assertion?

A There are six confirmed isolates in California, in addition to several languages that may ultimately be confirmed as isolates, while there are only five confirmed isolates in what is now the US Southeast, including Atakapa.

B In North America, the distance of isolate-speaking peoples from either the nearest mountain chain or nearest swamplands or coastline is significantly less, on average, than that of the homelands of peoples who speak languages belonging to language families.

C Isolates often possess similarities to neighboring nonisolate languages at the level of vocabulary, suggesting that even though isolates are grammatically singular, they can easily acquire words from unrelated languages through cultural exchange.

D There is a higher incidence of isolates among Native peoples who relied mainly on foraging, hunting, and fishing than among those who practiced agriculture, although some isolate-speaking peoples did farm intensively.

题目 129 - Section 1, Module 2: Reading and Writing (easy)

Text 1

Spain has long used gross domestic product (GDP), the market value of the goods and services produced in a given period, as a key metric for national progress and well-being. Although GDP has value as an economic metric, myriad other factors influence people's quality of life to varying degrees, and it would be wrong to assume that a rising GDP necessarily equates to increasing societal well-being.

Text 2

Recognizing that a country's progress rests on both economic and noneconomic factors, in 2008 a government agency in New Zealand began measuring well-being with a household survey. By considering indicators in multiple domains—such as civic engagement and time use—rather than relying solely on GDP, New Zealand gains a truer understanding of its national well-being.

Based on the texts, the author of Text 1 would most likely agree with which statement about "civic engagement" and "time use," mentioned in Text 2?

A They have been a standard factor addressed in Spain's evaluation of national well-being.

B They may be important influences on the well-being of people in Spain as well as New Zealand.

C They may not correlate with GDP as well in Spain as they do in New Zealand.

D They are a better metric of economic activity in New Zealand than GDP is.

题目 130 - Section 1, Module 2: Reading and Writing (easy)

Christina Zdenek, Chris Hay, and their team studied hearing in woma pythons (*Aspidites ramsayi*), eastern brown snakes (*Pseudonaja textilis*), and rough-scaled death adders (*Acanthophis rugosus*). They observed whether the snakes move toward or away from the source of a sound traveling through the air. The researchers concluded that woma pythons, unlike eastern brown snakes and rough-scaled death adders, were more curious than cautious about the airborne sound.

Which finding, if true, would most directly support the researchers' conclusion?

A Woma pythons, eastern brown snakes, and rough-scaled death adders are typically preyed on by foxes and cats in the wild.

B During the trials, woma pythons moved toward the source of the sound, whereas eastern brown snakes and rough-scaled death adders moved away from the source of the sound.

C During the trials, woma pythons moved farther away from the source of the sound than did eastern brown snakes and rough-scaled death adders.

D Both eastern brown snakes and rough-scaled death adders typically prey on woma pythons.

题目 142 - Section 1, Module 2: Reading and Writing (hard)

The fifteenth-century English Heege Manuscript is unusual among collections of its kind and time given its focus on scary stories over more acclaimed works for polite society like courtly love poems. But according to professor James Wade, even more unusually, the three texts in the manuscript's first booklet were likely copied by Richard Heege from a traveling minstrel's repertoire book. The evidence includes performative elements such as the narrator making oaths toward the audience, joking about peasants and royalty, and making jokes that could be modified to refer to the town of Holbrooke when in nearby Radford to avoid giving offense.

As presented in the text, Wade would most likely agree with which statement about the first booklet of the Heege Manuscript?

A It was likely a copy Heege intended to give to a traveling minstrel working in the area around Holbrooke and Radford.

B The texts it includes were based on stories about the area around Holbrooke and Radford, but these names were later removed.

C It was written down by Heege from memory based on a performance by a traveling minstrel who worked in the area around Holbrooke and Radford.

D It was copied from a text that originated from a traveling minstrel who worked in the area around Holbrooke and Radford.

正确答案: D

题目 143 - Section 1, Module 2: Reading and Writing (hard)

Yingguang Frank Chan and colleagues have explored how convergent evolution—a phenomenon that occurs when the same trait evolves independently in two reproductively separate lineages—can result from a genetic mechanism shared by both lineages. Meanwhile, Patricia J. Wittkopp and colleagues have investigated how convergence occurs through different genetic mechanisms, but the relative prevalence of convergence through shared and different genetic processes is still poorly understood. This motivated biologists Delbert A. Green II and Cassandra G. Extavour to evaluate both types of convergence in a single study for their 2012 paper.

According to the text, what did Chan and colleagues focus on in their study?

A The convergence of traits in lineages that are not reproductively separate

B The relative prevalence of convergent traits emerging through shared and different genetic mechanisms

C Convergent traits arising from different genetic mechanisms

D Convergent traits arising from a shared genetic mechanism

题目 145 - Section 1, Module 2: Reading and Writing (hard)

Describing the adverb as "a word that distracts," novelist Elmore Leonard is one of several authors and literary critics to recommend minimizing the use of adverbs, especially those ending in *-ly* (e.g., "graciously"), in works of fiction. To investigate the prevalence of *-ly* adverbs in novels, Ben Blatt used natural language processing—machine learning technology that reads and interprets text—to calculate the rates at which these words occur in both popular fiction and in novels that commonly appear on lists of notable works of English literature, such as George Orwell's *Animal Farm*. Blatt concluded that there is a positive correlation between *-ly* adverb avoidance and novels' perceived literary merit.

Which finding, if true, would most clearly be an exception to the pattern Blatt identified?

A The novels of Virginia Woolf, one of the most celebrated writers of the twentieth century, have an average of 116 *-ly* adverbs per 10,000 words, while the novels of Jane Austen, one of the most celebrated writers of the nineteenth century, have an average of 128 *-ly* adverbs per 10,000 words.

B D.H. Lawrence's acclaimed novel *Women in Love* and novels by several genre fiction authors that many critics regard as lacking in artistic quality have a comparable number of *-ly* adverbs per 10,000 words.

C John Steinbeck's classic novel *The Grapes of Wrath* has the lowest *-ly* adverb rate among Steinbeck's novels in Blatt's study, while F. Scott Fitzgerald's classic novel *The Great Gatsby* has the lowest *-ly* adverb rate among Fitzgerald's novels in Blatt's study.

D Whereas award-winning and best-selling novels have on average 114 and 115 *-ly* adverbs per 10,000 words, respectively, fan fiction novels, which are

www.dsatuz.com

frequently authored by nonprofessional authors, have on average 154 *-ly* adverbs per 10,000 words.

题目 146 - Section 1, Module 2: Reading and Writing (hard)

Populations of common yellowthroats and other birds of the Colorado River Delta (CRD) were in decline for decades in part because of the disappearance of native tree species, such as honey mesquite. Eduardo González-Sargas et al. studied CRD bird populations from 2002 to 2021 to assess the impact of planting native trees in targeted treatment sites beginning in 2010. Water deliveries—which began in 2014 throughout the CRD and could theoretically result in passive revegetation by native trees of control sites where active planting hadn't occurred—coincided with increases in overall bird abundances throughout the CRD, irrespective of treatment status. Nevertheless, the researchers concluded that water deliveries likely don't explain this trend in the bird population.

Which additional finding from the study, if true, would most directly support the researchers' conclusion?

A Changes in overall bird abundance were driven mainly by changes among species living in wetland habitats in control sites, while changes among species in treatment sites were negligible.

B Percentages of site surfaces covered with water increased at equal rates for treatment and control sites between 2014 and 2021.

C Observations of CRD vegetation revealed that honey mesquite and other native tree species failed to thrive in treatment sites until 2014.

D Monitoring revealed that vegetative cover increased in treatment sites from 2014 onward and decreased in control sites during the same period.

题目 147 - Section 1, Module 2: Reading and Writing (hard)

Southern Illinois's Pulaski County is among the most rural counties in the United States: the US Census Bureau classified it as 100% rural in 2010. Researchers often struggle to recruit residents of counties like Pulaski for inclusion in studies. Melissa Valerio and colleagues tested whether an approach called snowball sampling improves recruitment. Working in two rural counties, they recruited a few people (known as "seeds") with the characteristics desired for a proposed study and asked them to recruit additional participants from their social networks. Though the seeds were given minimal guidance, many more people they recruited had the desired characteristics for the study than would be expected by chance alone, most likely because _____blank

Which choice most logically completes the text?

A the characteristics that made the seeds desirable for inclusion in the proposed study may be unknown to some members of the seeds' social networks.

B the seeds' social networks tend to be somewhat smaller than the networks of people who do not live in rural areas.

C most seeds' social networks include some people who do not know one another and who share few characteristics.

D the seeds' social networks include a high proportion of people who share characteristics with the seeds.

题目 148 - Section 1, Module 2: Reading and Writing (hard)

Blue holes—large marine sinkholes, like Nancy's Blue Hole in the Abaco Islands—can be hundreds of meters deep and are sometimes part of widespread subterranean networks of passageways. In 2021, researchers conducted the first formal study of the Taam Ja' Blue Hole (TJBH), located in a bay of fresh water and salt water on Mexico's coast, and reported a maximum depth of 274 meters. Teresa Álvarez-Legorreta and colleagues later reinvestigated the depth of the TJBH, determining that it exceeded 400 meters; additionally, they detected variations in characteristics across water layers. Layers more than 400 meters deep began to show density and salinity conditions akin to those of the nearby Caribbean Sea. Álvarez-Legorreta and colleagues therefore suggest that _____blank

Which choice most logically completes the text?

A there may be tunnels and caves that connect the TJBH and the waters of the Caribbean deep underground.

B researchers should reevaluate existing measurements of the depths of Nancy's Blue Hole and other blue holes where the conditions in very deep waters are similar to those of waters in open seas.

C the apparent relationship between depth and salinity level in the TJBH is the inverse of that found in the Caribbean Sea.

D in the TJBH, there are greater differences between water layers less than 275 meters deep than there are between water layers greater than 400 meters deep.

题目 158 - Section 1, Module 2: Reading and Writing (hard)

While researching a topic, a student has taken the following notes:

- Many disused railroad corridors in the US have been converted into public trails since the 1960s.
- Such trails are known as rail trails.
- The Mesabi Trail is a rail trail located in Missouri.
- It is 135 miles long and is made of asphalt.
- The Great Western Trail is a rail trail located in Illinois.
- It is 12 miles long and is made of crushed stone.

The student wants to compare the lengths of the two rail trails. Which choice most efectively uses relevant information from the notes to accomplish this goal?

A At 135 miles long, the Mesabi Trail is much longer than the 12-mile Great Western Trail.

B Rail trails of diferent lengths can be found in Missouri and Illinois.

C Similar to the Great Western Trail, the 135-mile-long Mesabi Trail was created from a disused railroad corridor.

D Although they are made of diferent materials, the Mesabi Trail and the Great Western Trail are nearly identical in length.

题目 159 - Section 1, Module 2: Reading and Writing (hard)

While researching a topic, a student has taken the following notes:

- Conrad II was crowned emperor of the Holy Roman Empire (HRE) by Roman Catholic Pope John XIX on March 26, 1027.
- Conrad II conquered the Kingdom of Burgundy for the HRE.
- Frederick III was crowned emperor of the HRE by Pope Nicholas V on March 19, 1452.
- Frederick III reigned as Holy Roman emperor for over 50 years.
- Scholar Charles Lockett: The HRE's "history was characterized by a constant interface with the Roman Catholic Church."
- Lockett: "Much of [the HRE's] history was intimately concerned with the struggle over Papal authority and legitimacy."

The student wants to use historical evidence and a quotation from Lockett to analyze the relationship between the HRE and the Roman Catholic Church. Which choice most efectively uses relevant information from the notes to accomplish this goal?

A The contrast between Conrad II and Frederick III, who reigned as Holy Roman emperor for over 50 years, supports Lockett's analysis of the relationship between the HRE and the church, specifically its "struggle over Papal authority and legitimacy."

B That emperors Conrad II and Frederick III were both crowned by Roman Catholic popes suggests that the HRE and the church maintained close ties despite "the struggle over Papal authority and legitimacy" Lockett highlights.

C According to Lockett, the HRE's "constant interface with the Roman Catholic Church" was exemplified by Conrad II, who conquered the Kingdom of Burgundy for the HRE.

D As historical evidence shows, from the day he became emperor—March 19, 1452—Frederick III resisted what Lockett referred to as the HRE's "constant interface with the Roman Catholic Church."

题目 160 - Section 1, Module 2: Reading and Writing (hard)

While researching a topic, a student has taken the following notes:

- Onomatopoeias are words that imitate the sounds they represent.
- Onomatopoeias used to represent the same sound often difer from language to language.
- This variation is due in part to diferences in how languages are structured.
- “Hatchoei” is a Thai onomatopoeia that represents the sound of a sneeze.
- “Atshii” is a Finnish onomatopoeia that represents the sound of a sneeze.

The student wants to emphasize a similarity between the words “hatchoei” and “atshii.” Which choice most efectively uses relevant information from the notes to accomplish this goal?

A The Thai word “hatchoei,” which represents the sound of a sneeze, is an onomatopoeia.

B Variation in the words “hatchoei” (Thai) and “atshii” (Finnish) is due in part to diferences in how the languages are structured.

C The Thai word “hatchoei” and the Finnish word “atshii” are both onomatopoeias that represent the sound of a sneeze.

D The words “hatchoei” and “atshii” are Thai and Finnish, respectively.

题目 169 - Section 1, Module 2: Reading and Writing (hard)

In Algeria, use of solid fuel (e.g., coal, wood) as a share of total household fuel use fell by approximately three-fourths between 2000 and 2019; such shifts are typically explained by appeal to the energy ladder, a model holding that fuel choice is mediated mainly by household income (specifically, high-technology fuels displace solid fuels as incomes rise). Rasmus Heltberg's study of fuel use in Ghana shows how reductive this model is, however: household fuel use was heterogeneous, flexible, and influenced by several factors, including the stability of the local electrical grid.

Based on the text, which choice best explains why the author characterizes the energy ladder as "reductive"?

A The energy ladder assumes that the same factor influences household fuel choice in all locations, but Heltberg's study showed that fuel choice in Ghana is influenced by different factors than is fuel choice in Algeria.

B The energy ladder attributes household fuel choice primarily to a single characteristic of households, but Heltberg's study showed that multiple circumstances can afect household fuel choice.

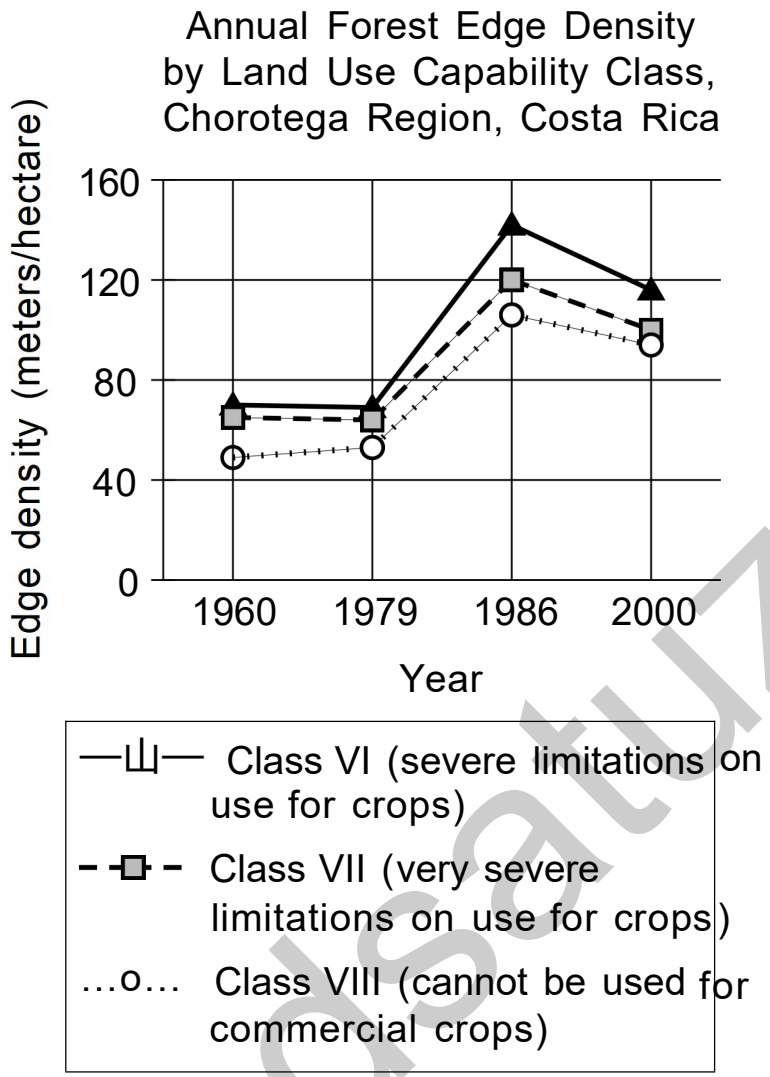

C The energy ladder holds that the adoption of one type of fuel means that another type of fuel must be displaced, but Heltberg's study showed that several different fuel types are typically used in equal proportion.

D The energy ladder asserts that households only consider one aspect of fuel when making fuel choices, but Heltberg's study showed that households ignore that characteristic of fuel and evaluate several other factors instead.

- The following 3 lines are shown:
  - Class VI (severe limitations on use for crops)
  - Class VII (very severe limitations on use for crops)
  - Class VIII (cannot be used for commercial crops)
- The Class VI (severe limitations on use for crops) line:
  - Begins at 1960, 70 meters per hectare
  - Falls gradually to 1979, 69 meters per hectare
  - Rises sharply to 1986, 142 meters per hectare
  - Falls gradually to 2000, 116 meters per hectare
- The Class VII (very severe limitations on use for crops) line:
  - Begins at 1960, 65 meters per hectare
  - Falls gradually to 1979, 64 meters per hectare
  - Rises sharply to 1986, 120 meters per hectare

Falls gradually to 2000, 100 meters per hectare

- The Class VIII (cannot be used for commercial crops) line:
  - Begins at 1960, 49 meters per hectare
  - Rises gradually to 1979, 53 meters per hectare
  - Rises sharply to 1986, 106 meters per hectare
  - Falls gradually to 2000, 94 meters per hectare

Due to the Chorotega region's accessibility, various types of forested areas were converted to cattle pasture as rising international meat prices drove a cattle ranching boom in the 1960s and 1970s. Juan Pablo Arroyo-Mora and colleagues used historical aerial photography and remote sensing data to track fragmentation metrics across different land use capability classes (categories that indicate possible uses of forest land). One such metric, edge density, can be used to indicate the regularity of forest patch sizes, with decreases in edge density suggesting a trend towards uninterrupted forest patches with more regular shapes. The team found a range of edge density levels, from lows of around 80 meters per hectare or less in the 1960s and 1970s for all classes, to a high in 1986 of approximately _____blank

Which choice most efectively uses data from the graph to complete the assertion?

A 120 for Class VIII.

B 140 for Class VI.

C 50 for Class VIII.

D 50 for Class VII.

正确答案: B

题目 171 - Section 1, Module 2: Reading and Writing (hard)

Based in Las Vegas, Nevada, Ballet Folklórico Sol Huasteco is one of the many dance companies in the United States devoted to *baile folklórico*, a style of dance that has flourished in Mexico and in Mexican American communities alike. Although it represents the hybridization of the Indigenous dance traditions of Mexico with dances brought there by Spanish colonizers beginning in the 1500s, baile folklórico emerged with its present array of formal attributes only in the 1950s, when choreographer Amalia Hernández adapted the traditionally participatory dances of Mexico for performance before a passive audience in a theater setting, interpolating into them elements of the staging and elaborate choreography of modern dance and classical ballet.

Which quotation from a dance scholar would most efectively illustrate an aspect of the text's characterization of the current formal attributes of baile folklórico?

A "In performances by Ballet Folklórico Sol Huasteco, the complex and precisely orchestrated movements of the dancers attest to baile folklórico's reliance on styles other than Indigenous and colonial Spanish dance."

B "By reaffirming baile folklórico as a hybrid of Indigenous and colonial Spanish traditions, companies such as Ballet Folklórico Sol Huasteco foster a sense of collective identity in Mexican American communities."

C "The contributions of classical ballet and modern dance to baile folklórico have sometimes been exaggerated; as seen in performances by Ballet Folklórico Sol Huasteco, the style's subject matter and gestural vocabulary remain rooted in the participatory dances of Indigenous and colonial Spanish societies."

D “Certain dances performed by Ballet Folklórico Sol Huasteco appear in the repertoires of dance companies throughout Mexico and the United States but are nonetheless associated with specific Indigenous groups, specific colonial Spanish dances, or both.”

题目 172 - Section 1, Module 2: Reading and Writing (hard)

Norway, which, according to international indices, has relatively strong democratic institutions and low intranational income inequality, experienced an inflation rate of 3.55% in 2016, whereas Cameroon, which shows the opposite pattern on such indices, had an inflation rate of only 0.86% that year. Such a comparison may seem consistent with the theoretical critique that by diluting control over the economy, democratic institutions inhibit states' ability to counteract inflationary pressures, but when Raj Desai et al. examined democratic strength, intranational inequality, and inflation in more than 100 countries, they found that democratic strength, if associated with low inequality, restrains inflationary pressures, which would suggest that _____blank

Which choice most logically completes the text?

A the 2016 difference between Norway's inflation rate and Cameroon's inflation rate is primarily but not exclusively attributable to the different levels of intranational income inequality in the two countries.

B international indices may have underestimated the strength of Norway's democratic institutions relative to Cameroon's.

C factors other than Norway's political structure contributed to the country's inflation rate exceeding that of Cameroon in 2016.

D inflation in Norway in 2016 would have been higher if Norway's government had less control over the economy.

题目 182 - Section 1, Module 2: Reading and Writing (hard)

While researching a topic, a student has taken the following notes:

- The Clovis First hypothesis proposes that ancient humans known as Clovis were the first to populate North America.
- The Clovis arrived around 13,000 years ago.
- Stone tools found at the Hebior site in Wisconsin date to approximately 16,500 years ago.
- Butchered mammoth bones found at the Old Crow site in the Yukon date to approximately 25,000 years ago.
- These items support the idea that humans were present in North America before the Clovis population arrived.

The student wants to emphasize a similarity between the items found at Hebior and those found at Old Crow. Which choice most efectively uses relevant information from the notes to accomplish this goal?

A Objects discovered at Hebior date to approximately 16,500 years ago; those found at Old Crow precede them, however, dating to approximately 25,000 years ago.

B Stone tools from Hebior date to approximately 16,500 years ago; in addition, butchered mammoth bones (which date to approximately 25,000 years ago) were discovered at Old Crow.

C The Clovis First hypothesis proposes that the Clovis, arriving around 13,000 years ago, were the first humans in North America.

D Although the butchered mammoth bones found at Old Crow are older than the stone tools found at Hebior, both clearly predate the arrival of the Clovis population.

题目 183 - Section 1, Module 2: Reading and Writing (hard)

While researching a topic, a student has taken the following notes:

- It is generally accepted that all crabs have pincers.
- The statement "all crabs have pincers" is falsifiable.
- A falsifiable statement can theoretically be proved false by observation.
- "All crabs have pincers" could be falsified by observing a single crab without pincers.
- The statement "some crabs have pincers" is not falsifiable.
- Falsifying it would require observing every crab in the universe, which is not possible.

The student wants to contrast the falsifiability of two statements about crabs. Which choice most efectively uses relevant information from the notes to accomplish this goal?

A The statement "all crabs have pincers" could be proved false by observing a single crab without pincers, whereas falsifying "some crabs have pincers" is impossible.

B The statement "some crabs have pincers" could be falsified by observing every crab in the universe, but it is not possible to falsify the statement "all crabs have pincers."

C One could theoretically observe a single crab without pincers; however, one could not falsify the statement "some crabs have pincers."

D While it is generally accepted that all crabs have pincers, the statement "some crabs have pincers" is not falsifiable.

题目 184 - Section 1, Module 2: Reading and Writing (hard)

- In a 2008 study, Jogar and Moora tested the effect of plant litter on seedling emergence in a grassland setting.
- The test site was a flooded grassland in a temperate midlatitude climate in Estonia.
- The researchers found that in these environmental conditions the presence of plant litter had a negative effect on seedling emergence.
- Seedling emergence is when a seedling sprouts above ground and begins photosynthesis.

Which choice most effectively uses information from the given sentences to present the study's findings to an audience already familiar with the concept of seedling emergence?

A Jogar and Moora found that in a flooded grassland and a temperate midlatitude climate the presence of plant litter had a negative effect on seedling emergence.

B The findings of Jogar and Moora's study were published in 2008.

C In a 2008 study by Jogar and Moora, plant litter was found to have a negative effect on seedling emergence, which is when a seedling sprouts and begins photosynthesis.

D The effect of plant litter, which includes dead leaves and other plant matter, on seedling emergence has been the subject of scientific study.

题目 186 - Section 1, Module 2: Reading and Writing (hard)

Text 1

Goat farming and other human activities are sources of atmospheric methane (CH_4), but, as Thomas Bianchi and colleagues have shown, so too are naturally occurring emissions, such as those from river floodplains. This biogenic CH_4 is challenging to track given natural sources' variability and spatial difusion, but one promising approach is to use CH_4 flux data from extant monitoring infrastructure as proxies for CH_4 fluxes in unmonitored areas.

Text 2

Sparkle Malone and colleagues examined the United States' network of eddy covariance (EC) towers—the equipment used to track CH_4 fluxes—to evaluate the utility of network data for quantifying biogenic CH_4. Malone et al. concluded that current EC tower coverage is insufficient to represent the country's ecological variability, particularly in the southwestern and southeastern regions, resulting in unworkably high uncertainty in CH_4 flux estimates.

Based on the texts, the author of Text 1 and Malone et al. (Text 2) would most likely agree with which statement about biogenic CH_4 fluxes?

A They can be plausibly inferred from measured CH_4 fluxes.

B They are harder to measure in the southwestern and southeastern regions than elsewhere.

C They are more challenging to measure than are CH_4 fluxes from human sources.

D They cannot all be directly measured at present.

题目 187 - Section 1, Module 2: Reading and Writing (hard)

A creole language is an amalgam of a lexifier, or primary contributor of grammar and vocabulary, with one or more substrates, or secondary contributors. English-lexifying creoles in West Africa, such as Cameroonian Creole, rely on West African substrates, while Hawaiian Pidgin relies on ʻŌlelo Hawaiʻi, the Polynesian language of the Native Hawaiian people, with further contributions from Okinawan and other East Asian languages, Portuguese, and Spanish. This is a heterogeneous history, even for a creole language. Moreover, numerous similarities are found among the East Asian substrates, as well as between Portuguese and Spanish. Thus, it can be challenging to credit certain words or features of grammar or pronunciation to any one substrate.

Which statement, if true, would best illustrate the challenge described in the text?

A Stative structures in which verbs modify subjects and serve a descriptive function comparable to that of adjectives are hallmarks of Hawaiian Pidgin as well as of East Asian languages such as Okinawan, yet the syntax of Hawaiian Pidgin's stative structures confirms their origin in ʻŌlelo Hawaiʻi.

B The usage of the Hawaiian Pidgin verb "ste" to convey a temporary state, as in the statement "da watah ste cold" (the water is cold), most nearly resembles that of the ʻŌlelo Hawaiʻi verb *noho*, though the Portuguese verb *ficar* and the Spanish verb *estar* have similar usages and may also exert an influence on "ste."

C As is also the case with some first-language speakers of Cameroonian Creole, many first-language speakers of Hawaiian Pidgin align their pronunciation, word choice, and syntax more closely with English in certain conversational contexts than in others.

D Hawaiian Pidgin's substitution of "d" for the voiced "th" consonant (as used in "that") and of "t" for the unvoiced "th" consonant (as used in "thick") can be credited to the absence of "th" consonants in ʻŌlelo Hawaiʻi, though most other Polynesian languages lack "th" consonants too.

题目 188 - Section 1, Module 2: Reading and Writing (hard)

It is hard for publishers and printers to create very long books that balance the requirements of readability, durability, and cost. Among some exceptionally long novels published in English, Victor Hugo's *Les Misérables* (translated from French) was published in a 1,194-page edition and runs to an estimated 770,000 words, while Marguerite Young's *Miss Macintosh, My Darling* (written originally in English) was published in a 1,198-page edition and runs to an estimated 750,000 words. Assuming that both books' pages are the same size, this suggests that _____blank

Which choice most logically completes the text?

A the edition of *Les Misérables* uses smaller print than does the edition of *Miss Macintosh, My Darling*.

B on average, readers will take as much time to read *Miss Macintosh, My Darling* as they will to read *Les Misérables*.

C the edition of *Miss Macintosh, My Darling* was less expensive to print compared to the edition of *Les Misérables*.

D *Les Misérables* likely has a lower word count in its original French edition.

- Calida Garcia Rawles is an African American painter.
- She is known for her large-scale, hyperrealistic paintings depicting African American figures in water.
- The painting *Guardian* (96 × 48 in) depicts a woman in a white dress floating in the center of the canvas.
- *The Space in Which We Travel* (84 × 144 in) depicts two young girls in white dresses floating in the center of the canvas.
- She paints the water with vivid blue colors, including mint blue and denim.
- The mood in the paintings is calm.

Which choice most efectively uses information from the given sentences to introduce Rawles's body of work to a new audience?

A At 84 by 144 inches, *The Space in Which We Travel* is even larger than the sizable 96-by-48-inch painting *Guardian*.

B While the number of figures may difer, constant among the hyperrealistic works is their calm mood.

C Large in scale and calm in mood, the paintings of Calida Garcia Rawles feature hyperrealistic images of African American figures in vivid blue water.

D The water in paintings such as *Guardian* and *The Space in Which We Travel* is captured in vivid hues of mint blue and denim.

题目 198 - Section 1, Module 2: Reading and Writing (hard)

Though Vasily Grossman's novel *Stalingrad* is considered inferior to his later work *Everything Flows*, some critics praise it despite an arduous writing process required to satisfy Soviet censors (Marissa Moss in the *New York Journal of Books* called *Stalingrad* "a treasure"). Of the novel's eleven drafts, the second is inexplicably missing, the sixth closely hews to Soviet orthodoxy, and published versions most resemble the fifth. The English edition's translators culled material from unpublished drafts and published Russian versions to create a comprehensive edition.

Which choice best describes the overall structure of the text?

A It notes a novel's critical reception, addresses the complicated history of the novel's development, and suggests how that history informed the work of the novel's English translators.

B It describes a novel whose critical reputation has declined over time, explains the cause of that decline, and reports the effort of translators to rehabilitate a work they believe has been unjustly ignored.

C It mentions a novel whose quality critics do not agree on, discusses obstacles that make it difficult to determine what the best version of that novel might be, and offers a reason why some critics find a translation of the novel to be superior to the original.

D It refers to a novel that has several different published and unpublished versions, identifies characteristics that have led critics to prefer one version to others, and tells how translators justified their choice to bring one particular version of the novel into another language.

题目 199 - Section 1, Module 2: Reading and Writing (hard)

Text 1

Vernacular art, also known as folk art, refers to works by artists without extensive training who work outside the mainstream art world. In the last few decades, the Fine Arts Museum of San Francisco and similar cultural institutions have worked to bring vernacular art out of obscurity. As a result, Mose Tolliver's painting *Rainy Sunshine, Cats and Dogs, Drum Beater* can now be experienced by art lovers.

Text 2

Special exhibits and similar efforts by cultural institutions to promote vernacular artists often inadvertently uphold misleading distinctions between these artists and the creators of so-called "high" art. Artists regularly gain inspiration from each other: vernacular artists often reveal a familiarity with prevailing trends through their works, and more mainstream artists in turn often credit vernacular works as important influences.

Based on the texts, how would the author of Text 2 most likely respond to the author of Text 1's characterization of vernacular artists?

A By questioning the argument made in Text 1 that the general public will readily embrace works by vernacular artists as those works are brought to greater attention

B By suggesting that the author of Text 1 may be overstating the extent to which vernacular artists have been detached from the mainstream art world

www.dsatuz.com

C By agreeing with the author of Text 1 that some of the terms used to describe vernacular artists may be misleading

D By challenging the idea advanced in Text 1 that mainstream cultural institutions are suitable venues for adequately honoring vernacular artists

题目 200 - Section 1, Module 2: Reading and Writing (hard)

The lapalapa tree is one of many forest plant species native to Oahu (a Hawaiian island) that are at risk of extinction in the wild. Ecologists say that fruit-eating birds help support these species' population numbers by dropping seeds from the plants' fruits to different spots where new plants can grow. The birds native to Oahu that used to do this have all gone extinct over time. However, the hwamei and other fruit-eating bird species brought to the island in the last 150 years have been found to spread plant seeds. Based on this finding, some ecologists suggest that lapalapa trees and other forest plants native to Oahu _____blank

Which choice most logically completes the text?

A probably established themselves on the island at about the same time as hwameis and other fruit-eating birds did.

B were likely already close to extinction long before non-native birds arrived on the island.

C seem to produce fewer fruits per plant now than they did when fruit-eating birds native to the island were still present.

D may now depend on non-native birds, such as the hwamei, to help maintain and increase their populations on the island.

题目 201 - Section 1, Module 2: Reading and Writing (hard)

Research into whether floating mats of macroalgae affect the prevalence of microphytobenthos (MPB)—benthic, or bottom-dwelling, microalgae—has produced varying results: Amber Hardison and colleagues determined that macroalgae do not impact MPB, whereas Julio Bohórquez and colleagues observed that benthic chlorophyll concentrations (a common measure of MPB biomass) increased in the presence of macroalgae. Hypothesizing that macroalgal mats have a negative effect on MPB biomass, Alice F. Besterman and Michael L. Pace surveyed mudflats in Oyster Harbor and other coastal sites in Virginia. Because Besterman and Pace did not find a significant correlation between benthic chlorophyll concentrations and the abundance of macroalgal mats, it can be concluded that _____blank

Which choice most logically completes the text?

A differences between their study design and that of Bohórquez and colleagues likely explain the discrepancy in the two studies' findings about the responses of MPB to macroalgal mats.

B their hypothesis about the relationship between macroalgae and MPB was not supported and their finding was instead consistent with that of Hardison and colleagues.

C rather than inhibiting chlorophyll production in MPB, as they had hypothesized, macroalgal mats may positively affect chlorophyll production.

D although this finding was consistent with that of Bohórquez and colleagues, trends in MPB biomass are likely not a result of stresses caused by macroalgae.

题目 224 - Section 2, Module 1: Math (unknown)

$$y \leq x + 8$$

$$y \geq -7x - 8$$

Which point x, y is a solution to the given system of inequalities in the *xy*-plane?

A 0, -9

B 0, 9

C -3, 0

D 3, 0

正确答案: D

题目 225 - Section 2, Module 1: Math (unknown)

Each 1-acre section of a farmer's field contains either wheat or corn. In one year, the farmer expects a yield of 40 to 44 bushels of wheat per acre of wheat planted. The yield of corn for each acre of corn planted is expected to be 4 times the yield of wheat for each acre of wheat planted. The farmer's goal for this year is to have a yield of at least 26,900 total bushels of wheat and corn. Based on the expected yields, if the farmer plants 80 acres of wheat, what is the minimum number of whole acres of corn the farmer must plant to ensure the goal is met?

正确答案: 149

题目 226 - Section 2, Module 1: Math (unknown)

$$y = 9^{x+3}$$

In the *xy*-plane, the graph of the given equation has a *y*-intercept of 0, p, where p is a constant. Which of the following equivalent forms of the equation displays the value of p as a constant or coefficient?

A $y = \frac{1}{81}9^{x+5}$

B $Y = \frac{1}{9}9^{x+4}$

C $Y = 81 9^{x+1}$

D $Y = 7299^{x}$

正确答案: D

题目 227 - Section 2, Module 1: Math (unknown)

$$fx = -x^2 + bx + c$$

The function f is defined by the given equation, where b and c are constants. The graph of $y = f(x)$ in the *xy*-plane passes through the points 0, 5 and 4, 0. What is the value of b?

正确答案: 2.75

www.dsatuz.com

题目 228 - Section 2, Module 1: Math (unknown)

A science club from a certain high school in Ohio conducted an experiment to study the efects of smell on taste. A sample of 95 students was selected at random from the high school to participate in the experiment. First, the students tasted a pureed food sample while wearing covered goggles and nose plugs. Then, the students tasted the same pureed food sample without nose plugs. 38 students were able to correctly identify the pureed food sample while wearing nose plugs. Which of the following is the largest population to which the results of the experiment can be generalized?

A All students from high schools in Ohio

B The 95 students who participated in the experiment

C All students from the high school

D The 38 students who were able to correctly identify the pureed food sample while wearing nose plugs

正确答案: C

题目 229 - Section 2, Module 1: Math (unknown)

A total of 50 people attended a conference and were ofered 4 types of entrees. The table shows the number of people who chose each type of entree.

Type of entree	Number of people
Beef	13
Chicken	24
Fish	6
Vegetarian	7
Total	50

If one of these people is selected at random, what is the probability of selecting a person who chose a vegetarian entree?

A $\frac{7}{100}$

B $\frac{7}{50}$

C $\frac{1}{4}$

D $\frac{7}{10}$

正确答案: B

题目 283 - Section 2, Module 2: Math (easy)

- For the line in the system:
  - The line is horizontal.
  - The line passes through the following points:
    - (negative 8 comma 5)
    - (negative 4 comma 5)
    - (2 comma 5)
- For the parabola in the system:
  - The parabola opens downward.
  - The vertex is at the point (negative 4 comma 5).
  - The parabola passes through the following points:
    - (negative 5 comma 4)
    - (negative 4 comma 5)
    - (negative 3 comma 4)

The graph of a system of a linear equation and a quadratic equation is shown. What is the solution x, y to this system?

A 04

www.dsatuz.com

B 05

C -45

D 4-5

正确答案: C

题目 284 - Section 2, Module 2: Math (easy)

There are 28 residents in a certain apartment building. 100% of these residents attended the first building meeting of the year. How many of these residents attended the first building meeting of the year?

A 0

B 28

C 280

D 2,800

正确答案: B

www.dsatuz.com

题目 285 - Section 2, Module 2: Math (easy)

$$5x + 1 = 36$$

Which equation has the same solution as the given equation?

A $5x = -35$

B $5x = 1$

C $5x = 6$

D $5x = 35$

正确答案: D

题目 286 - Section 2, Module 2: Math (easy)

A certain swordfish can swim at a maximum speed of 23 meters per second. At this maximum speed, how many meters would this swordfish swim in 2 seconds?

正确答案: 46

www.dsatuz.com

题目 287 - Section 2, Module 2: Math (easy)

Jauna bought a block of cheese for 6 dollars and 3 boxes of crackers that were each the same price. The total price for the cheese and crackers was 18.36 dollars. What was the price, in dollars, of 1 box of crackers? (Assume there is no sales tax.)

A 4.12

B 4.36

C 8.24

D 18.00

正确答案: A

www.dsatuz.com

题目 288 - Section 2, Module 2: Math (easy)

A line in the *xy*-plane has a slope of $-\frac{1}{7}$ and passes through the point $0, 8$. Which equation represents this line?

A $y = -\frac{1}{7}x - 8$

B $y = -\frac{1}{7}x + 8$

C $y = \frac{1}{7}x - 8$

D $y = \frac{1}{7}x + 8$

正确答案: B

题目 289 - Section 2, Module 2: Math (easy)

$$\frac{26}{x} = -1$$

For what value of x is the given equation true?

正确答案: -26

www.dsatuz.com

题目 290 - Section 2, Module 2: Math (easy)

The function f is defined by fx = k + $\frac{x(x-3)}{2(x-3)}$, where k is a constant and k > 1. Which expression represents the value of f(11k)?

A $\frac{13k}{2}$

B $\frac{33k}{2}$

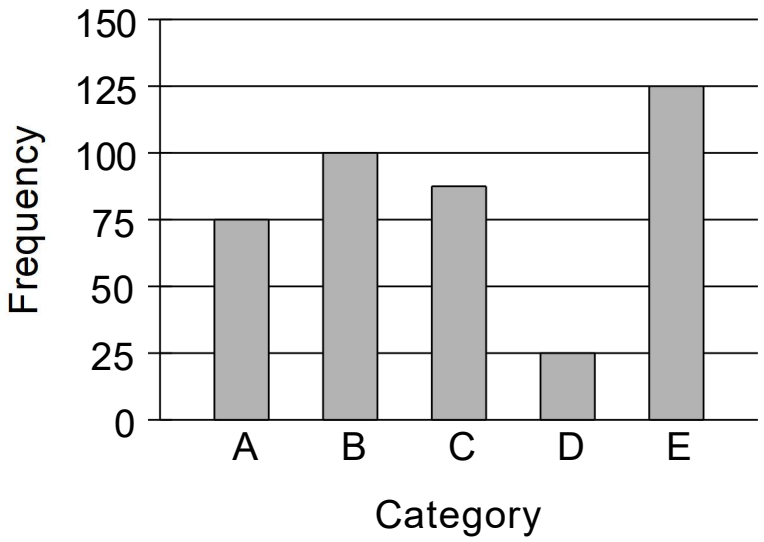

C $\frac{2k+11}{2}$

D $\frac{121k^2-31k}{2}$

正确答案: A

www.dsatuz.com

题目 291 - Section 2, Module 2: Math (easy)

- The Frequency data for the 5 bars are as follows:
  - Category A: 75
  - Category B: 100
  - Category C: 87.5
  - Category D: 25
  - Category E: 125

In the bar graph, which category has a frequency that is $\frac{1}{5}$ the frequency of category E?

A Category A

B Category B

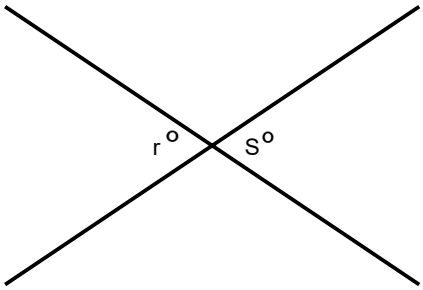

C Category C

D Category D

www.dsatuz.com

正确答案: D

题目 292 - Section 2, Module 2: Math (easy)

Note: Figure not drawn to scale.

- At the intersection of the 2 lines, the angles are labeled clockwise from top as follows:
  - Top: unlabeled
  - Right: s°
  - Bottom: unlabeled
  - Left: r°
- A note indicates the figure is not drawn to scale.

In the figure, two lines intersect at a point. If r = 73, what is the value of s?

正确答案: 73

www.dsatuz.com

题目 293 - Section 2, Module 2: Math (easy)

Which expression is equivalent to $72x^2 + 72$?

A $72xx + 1$

B $72xx + 72$

C $72x^2 + 1$

D $72x^2 + 72$

正确答案: C

题目 294 - Section 2, Module 2: Math (easy)

The function f is defined by $fx = \frac{1}{8}x - 8$. What is the value of f96?

A 4

B 5

C 11

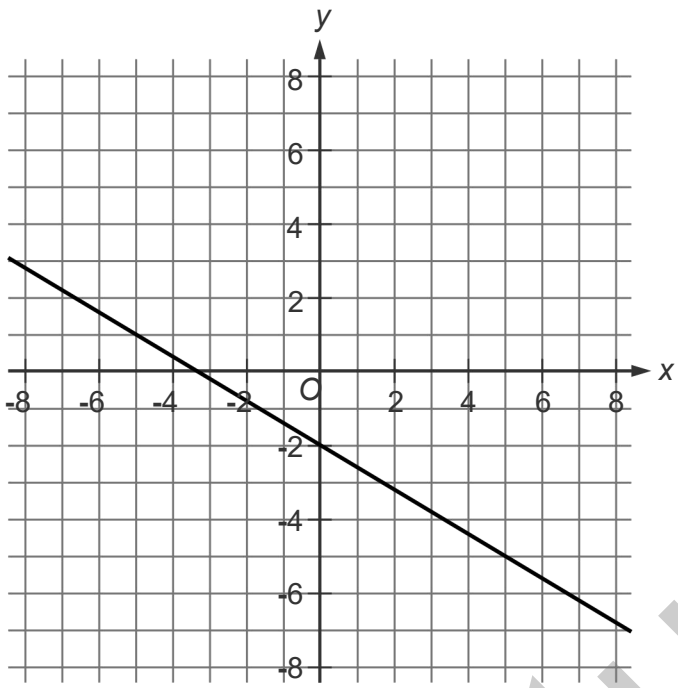

D 20

正确答案: A

Class	Sample size	Mean height (cm)	Margin of error (cm)
A	50	18.2	2.3
B	150	18.4	1.2

Two biology classes conducted studies to investigate the heights of a certain type of plant in a nursery. Each class selected a diferent random sample of this type of plant from the nursery and used this sample to determine an estimate for the mean height, in centimeters (cm), of all the plants of this type in the nursery and an associated margin of error. The results of the studies are shown in the table. Of the following, which statement best explains why the margin of error is smaller for class B than for class A?

A The plants in class B's sample had a larger mean height than the plants in class A's sample.

B The plants in class B's sample had a smaller mean height than the plants in class A's sample.

C Class B included fewer plants in its sample than class A.

D Class B included more plants in its sample than class A.

题目 335 - Section 2, Module 2: Math (easy)

$$y = 2x + 13$$

$$y = 2x - 13$$

How many solutions does the given system of equations have?

A Zero

B Exactly one

C Exactly two

D Infinitely many

正确答案: A

题目 336 - Section 2, Module 2: Math (easy)

$$xx - 12x + 8x - 4^2 = 0$$

What is the greatest solution to the given equation?

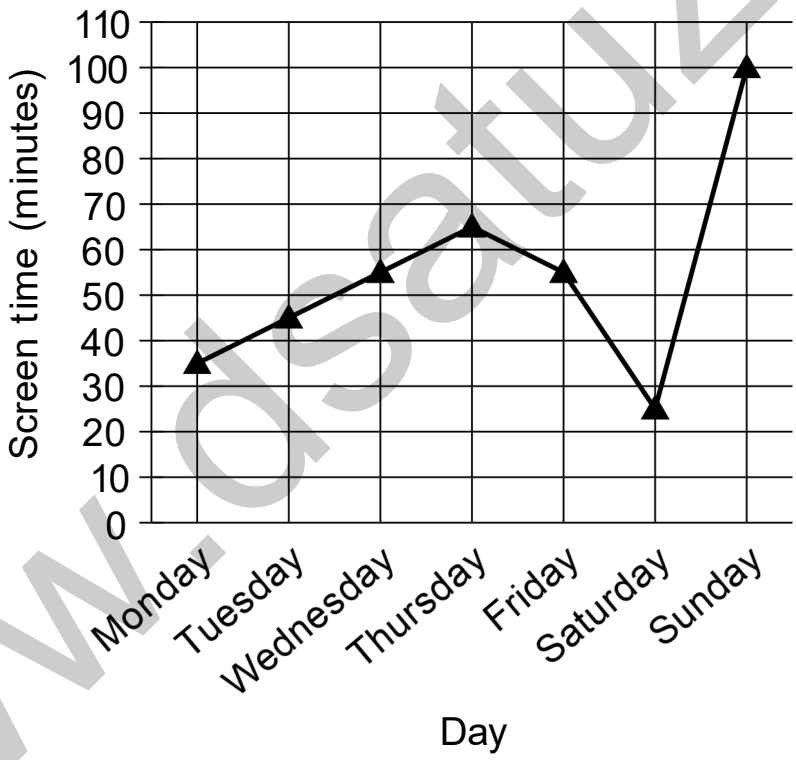

正确答案: 12

题目 337 - Section 2, Module 2: Math (easy)

Tatiana recorded the number of minutes of screen time on her devices for a one-week period. On Monday, she recorded 35 minutes of screen time. On Tuesday through Thursday, the number of minutes she recorded each day was more than the day before. On Friday and Saturday, the number of minutes she recorded each day was fewer than the day before. On Sunday, the number of minutes she recorded was the highest of any day of the week. Which of the following line graphs could represent Tatiana's recorded screen time for this week?

A

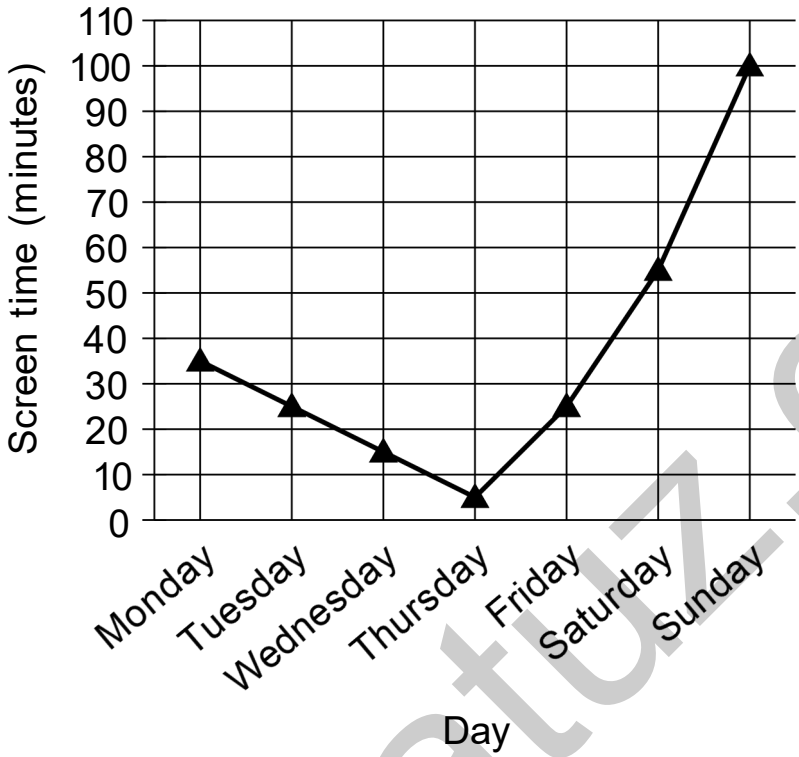

- The line graph:
  - Begins at Monday, 35 minutes
  - Rises gradually to Tuesday, 45 minutes
  - Rises gradually to Wednesday, 55 minutes
  - Rises gradually to Thursday, 65 minutes
  - Falls gradually to Friday, 55 minutes
  - Falls sharply to Saturday, 25 minutes

www.dsatuz.com

Rises sharply to Sunday, 100 minutes

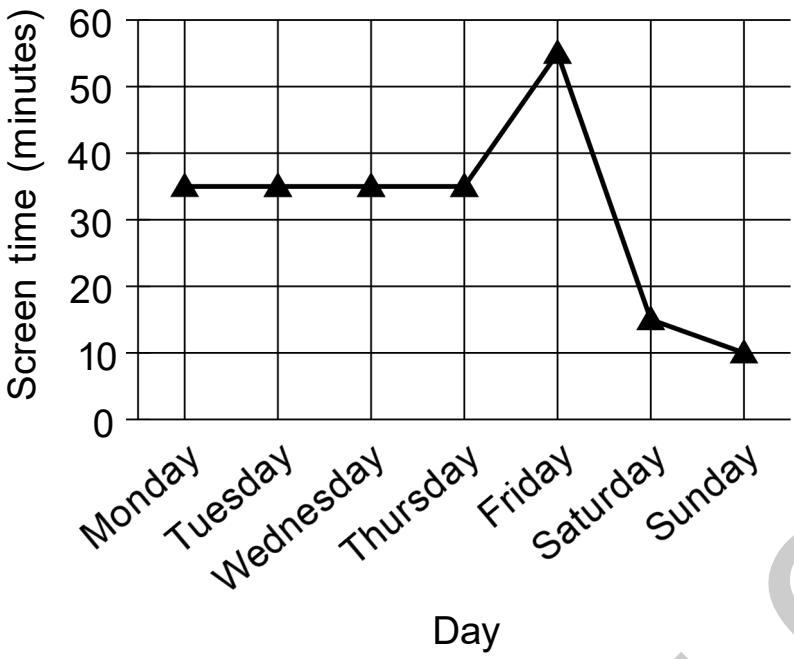

B

- The line graph:
  - Begins at Monday, 35 minutes
  - Falls gradually to Tuesday, 25 minutes
  - Falls gradually to Wednesday, 15 minutes
  - Falls gradually to Thursday, 5 minutes
  - Rises gradually to Friday, 25 minutes
  - Rises sharply to Saturday, 55 minutes
  - Rises sharply to Sunday, 100 minutes

C

题目 338 - Section 2, Module 2: Math (easy)

Which expression is equivalent to 10x + 3x + 10y + 5y + 4?

A 32xy

B 28xy + 4

C 20x + 8y + 4

D 13x + 15y + 4

题目 339 - Section 2, Module 2: Math (easy)

$$6x + 30 = kx + 9 + 21$$

In the given equation, k is a constant. The equation has infinitely many solutions. What is the value of k?

A 6

B 9

C 21

D 30

www.dsatuz.com

题目 340 - Section 2, Module 2: Math (easy)

Hector receives a gift card worth $ 60.00 to pay for movies online. He uses his gift card to buy 3 movies for $ 6.50 each. If he spends the rest of his gift card balance on renting movies for $ 1.50 each, how many movies can Hector rent?

A 8

B 27

C 35

D 40

www.dsatuz.com

题目 341 - Section 2, Module 2: Math (easy)

A biologist recorded the pinching force of wild coconut crabs. The lowest pinching force recorded was 86.1 newtons and the highest pinching force recorded was 122.4 newtons. Which inequality is true for all values of c, where c represents any pinching force, in newtons, recorded for these wild coconut crabs?

A $c \leq 86.1$

B $c \geq 122.4$

C $43 \leq c \leq 61.2$

D $86.1 \leq c \leq 122.4$

www.dsatuz.com

题目 342 - Section 2, Module 2: Math (easy)

A total of 50 people attended a conference and were ofered 4 types of entrees. The table shows the number of people who chose each type of entree.

Type of entree	Number of people
Beef	16
Chicken	24
Fish	3
Vegetarian	7
Total	50

If one of these people is selected at random, what is the probability of selecting a person who chose a vegetarian entree?

A $\frac{7}{100}$

B $\frac{7}{50}$

C $\frac{1}{4}$

D $\frac{7}{10}$

www.dsatuz.com

题目 343 - Section 2, Module 2: Math (easy)

If 9x = 3, what is the value of 36x?

A 1

B 7

C 12

D 31

题目 344 - Section 2, Module 2: Math (easy)

At how many points do the graphs of the equations y = x - 22 and y = -2x intersect in the *xy*-plane?

www.dsatuz.com

题目 345 - Section 2, Module 2: Math (easy)

The function $F(m) = 6m$ models the force, in newtons, acting on each object in a certain field as a function of the object's mass m, in kilograms. Which statement is the best interpretation of $F(2) = 12$ in this context?

A The estimated force acting on an object with a mass of 2 kilograms is 12 newtons.

B The estimated force acting on an object with a mass of 12 kilograms is 2 newtons.

C The estimated force acting on an object with a mass of 6 kilograms is 2 newtons.

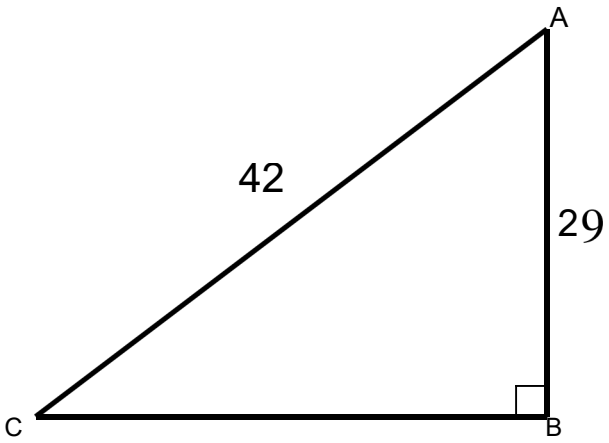

D The estimated force acting on an object with a mass of 6 kilograms is 12 newtons.

题目 346 - Section 2, Module 2: Math (easy)

When sunlight passes through a water column in a certain lake, the intensity of the light at a depth of 10.00 centimeters is 69.00% of the intensity of the light at the surface of the water column. The intensity of the light at a depth of 20.00 centimeters is 69.00% of the intensity of the light at a depth of 10.00 centimeters. The intensity of the light at a depth of 20.00 centimeters is p% of the intensity of the light at the surface of the water column. What is the value of p?

www.dsatuz.com

题目 347 - Section 2, Module 2: Math (easy)

Note: Figure not drawn to scaleF

- Angle upper B is a right angle.
- The length of side upper A upper B is 29.
- The length of side upper C upper A is 42.
- A note indicates the figure is not drawn to scale.

In the right triangle shown, what is the value of cosA?

A $\frac{1}{42}$

B $\frac{1}{29}$

C $\frac{29}{42}$

D $\frac{42}{29}$

www.dsatuz.com

题目 348 - Section 2, Module 2: Math (easy)

For the linear function g, the graph of $y = g(x)$ in the *xy*-plane has a slope of 4 and passes through the point 1, 16. Which equation defines g?

A $g(x) = 4x$

B $g(x) = 4x + 4$

C $g(x) = 4x + 12$

D $g(x) = 16x$

题目 349 - Section 2, Module 2: Math (easy)

$$y = 6x^2 - 36x + 54$$

$$y = 6x - 18$$

Which of the following ordered pairs x, y is a solution to the given system of equations?

A 4, 3

B 4, 6

C 9, 36

D 9, 216

www.dsatuz.com

题目 350 - Section 2, Module 2: Math (easy)

For the polynomial function f, the graph of y = fx in the *xy*-plane passes through the points -50, 10, and 70. Which of the following must be a factor of f(x)?

A x + 1

B x + 7

C x - 1

D x - 5

题目 351 - Section 2, Module 2: Math (easy)

For what value of a is $\sqrt[a]{r^{30}}$ equivalent to $r^{\frac{5}{6}}$, where r > 1?

www.dsatuz.com

题目 352 - Section 2, Module 2: Math (hard)

A scientist studying soil formation in diferent types of coniferous forests estimates that there are between 21 and 60 nematodes, a type of worm, in 1 -cubic centimeter of soil type D. Based on this estimate, which of the following inequalities best represents the possible number of nematodes, x, that are in 3 cubic centimeters of soil type D?

A $7 \leq x \leq 20$

B $21 \leq x \leq 60$

C $63 \leq x \leq 180$

D $180 \leq x \leq 201$

正确答案: C

题目 353 - Section 2, Module 2: Math (hard)

Data set A: 5, 15, 18, 18, 19

Data set B: 15, 18, 18, 19

Which of the following statements correctly compares the means of data set A and data set B?

A The mean of data set A is equal to the mean of data set B.

B The mean of data set A is greater than the mean of data set B.

C The mean of data set A is less than the mean of data set B.

D There is not enough information to compare the means of data set A and data set B.

正确答案: C

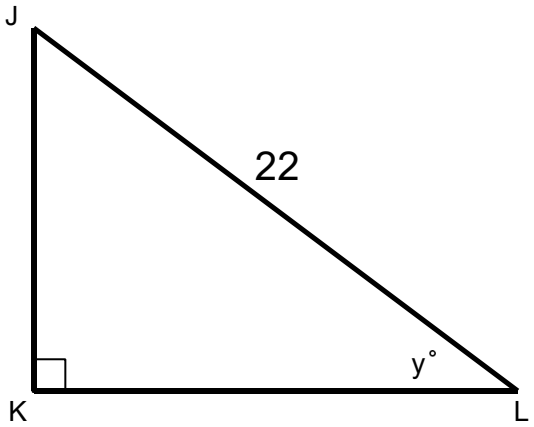

题目 354 - Section 2, Module 2: Math (hard)

During hibernation, American black bears do not eat or replenish calories. A certain black bear weighed 195 pounds when entering hibernation and lost weight at a rate of 0.5 pound per day. At this rate, how many days after entering hibernation did the black bear weigh 170 pounds?

正确答案: 50

www.dsatuz.com

题目 355 - Section 2, Module 2: Math (hard)

Note: Figure not drawn to scaleF

- Angle upper K is a right angle.
- The measure of angle upper L is y°.
- The length of side upper J upper L is 22.
- A note indicates the figure is not drawn to scale.

In triangle JKL, $\cos y° = \frac{21}{22}$. What is the length of KL?

正确答案: 21

www.dsatuz.com

题目 356 - Section 2, Module 2: Math (hard)

In the *xy*-plane, the graph of the linear function h contains the points $0, 0$ and 117. Which equation defines h, where y = hx?

A $hx = \frac{1}{17}x + 17$

B hx = x + 17

C hx = 17x + 17

D hx = 17x

正确答案: D

www.dsatuz.com

题目 357 - Section 2, Module 2: Math (hard)

There is a linear relationship between the amount of salt x, in grams, and the amount of water y, in liters, in a certain body of seawater. The table shows this relationship for three samples of this seawater.

Amount of salt (grams)	Amount of water (liters)
198	6
231	7
264	8

Which equation represents this relationship?

A $y = \frac{1}{66}x$

B $y = \frac{1}{33}x$

C Y = 33x

D Y = 66x

正确答案: B

www.dsatuz.com

题目 358 - Section 2, Module 2: Math (hard)

The function f is defined by fx = k + $\frac{x(x-3)}{2(x-3)}$, where k is a constant and k > 1. Which expression represents the value of f(11k)?

A $\frac{13k}{2}$

B $\frac{33k}{2}$

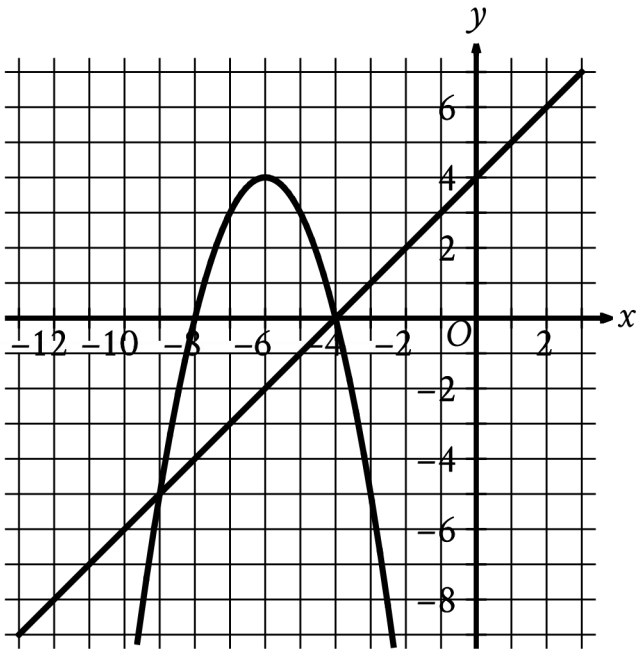

C $\frac{2k+11}{2}$

D $\frac{121k^2-31k}{2}$

正确答案: A

题目 387 - Section 2, Module 2: Math (hard)

A certain town has an area of 11,708,928 square yards. What is the area, in square miles, of this town? 1 mile = 1,760 yards

A 1.94

B 3.78

C 3,421.83

D 6,652.8

正确答案: B

题目 388 - Section 2, Module 2: Math (hard)

$$\frac{5}{8}5x + 8x + \sqrt{5k + 8}\ x - \sqrt{5k + 8} = 0$$

In the given equation, k is a positive constant. The product of the solutions to the equation is 96. What is the value of k?

正确答案: 52/5

www.dsatuz.com

题目 389 - Section 2, Module 2: Math (hard)

$$4x^2 - px + w = -88$$

In the given equation, p and w are integer constants. The equation has exactly one real solution. Which is NOT a possible value of w?

A -24

B 12

C 25

D 312

正确答案: C

题目 390 - Section 2, Module 2: Math (hard)

In triangle JKL, the measure of angle J is 90b°, the measure of angle K is 73a°, and the measure of angle L is 17a°, where a and b are constants. Which of the following must be true?

A cosL > sink

B cosL = sink

C cosL < sink

D There is not enough information to compare the values of cosL and sink.

正确答案: D

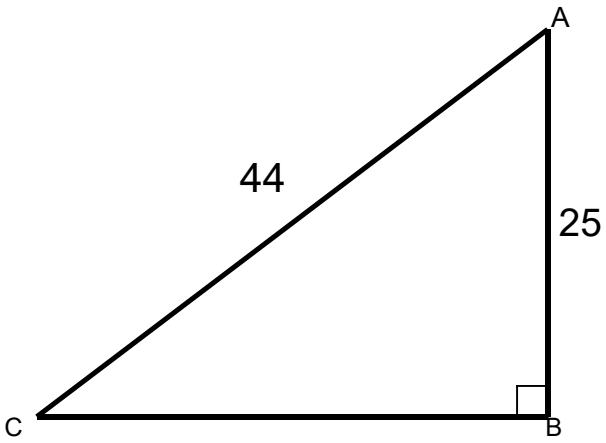

题目 391 - Section 2, Module 2: Math (hard)

A manager is responsible for ordering supplies for a cofee shop. The shop's inventory starts with 3,800 disposable cups, and the manager estimates that 120 of these cups are used each day. Based on this estimate, in how many days will the inventory of disposable cups reach 1,400?

正确答案: 20

www.dsatuz.com

题目 392 - Section 2, Module 2: Math (hard)

Note: Figure not drawn to scaleF

- Angle upper B is a right angle.
- The length of side upper A upper B is 25.
- The length of side upper C upper A is 44.
- A note indicates the figure is not drawn to scale.

In the right triangle shown, what is the value of cosA?

A $\frac{1}{44}$

B $\frac{1}{25}$

C $\frac{25}{44}$

D $\frac{44}{25}$

正确答案: C

题目 394 - Section 2, Module 2: Math (hard)

- For the line in the system:
  - The line slants gradually up from left to right.
  - The line passes through the following points:
    - (negative 6 comma negative 3)
    - (negative 3 comma 0)
    - (0 comma 3)
- For the parabola in the system:
  - The parabola opens downward.
  - The vertex is at the point (negative 4 comma 1).
  - The parabola passes through the following points:
    - (negative 6 comma negative 3)
    - (negative 5 comma 0)
    - (negative 4 comma 1)
    - (negative 3 comma 0)

The graph of a system of a linear equation and a quadratic equation is shown. A solution to the system is x, y. What is a possible value of x?

www.dsatuz.com

A 3

B -4

C -5

D -6

正确答案: D

题目 395 - Section 2, Module 2: Math (hard)

Class	Sample size	Mean height (cm)	Margin of error (cm)
A	50	18.2	2.3
B	150	18.4	1.2

Two biology classes conducted studies to investigate the heights of a certain type of plant in a nursery. Each class selected a diferent random sample of this type of plant from the nursery and used this sample to determine an estimate for the mean height, in centimeters (cm), of all the plants of this type in the nursery and an associated margin of error. The results of the studies are shown in the table. Of the following, which statement best explains why the margin of error is smaller for class B than for class A?

A The plants in class B's sample had a larger mean height than the plants in class A's sample.

B The plants in class B's sample had a smaller mean height than the plants in class A's sample.

C Class B included fewer plants in its sample than class A.

D Class B included more plants in its sample than class A.

题目 396 - Section 2, Module 2: Math (hard)

Tarun sold 33 sweatshirts and hats last week. He sold s sweatshirts for $\$ 24.50$ each and h hats for $\$ 13.00$ each. He sold 3 fewer sweatshirts than hats for a total of $\$ 601.50$. Which system of equations represents this situation?

A $s + s - 3 = 33$

$24.50s + 13.00h = 601.50$

B $h + h + 3 = 33$

$13.00s + 24.50h = 601.50$

C $s + s + 3 = 33$

$13.00s + 24.50h = 601.50$

D $h + h - 3 = 33$

$24.50s + 13.00h = 601.50$

正确答案: D

题目 399 - Section 2, Module 2: Math (hard)

$$x + y = 9$$

$$3x + 4y = 30$$

The solution to the given system of equations represents the number of groups with 3 students, x, and the number of groups with 4 students, y, in a class with a total of 30 students. Which of the following graphs represents this system of equations?

A

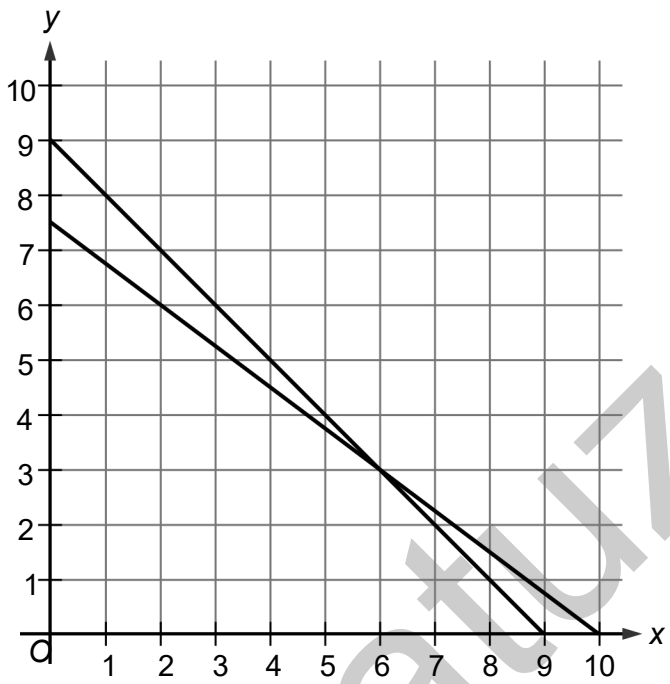

- For the first line in the system:
  - The line slants gradually down from left to right.
  - The line passes through the following points:
    - (0 comma StartFraction 15 Over 2 EndFraction)
    - (StartFraction 30 Over 7 EndFraction comma StartFraction 30 Over 7 EndFraction)
    - (10 comma 0)
- For the second line in the system:
  - The line slants gradually up from left to right.
  - The line passes through the following points:
    - (0 comma 0)

www.dsatuz.com

- (StartFraction 30 Over 7 EndFraction comma StartFraction 30 Over 7 EndFraction)
- (10 comma 10)

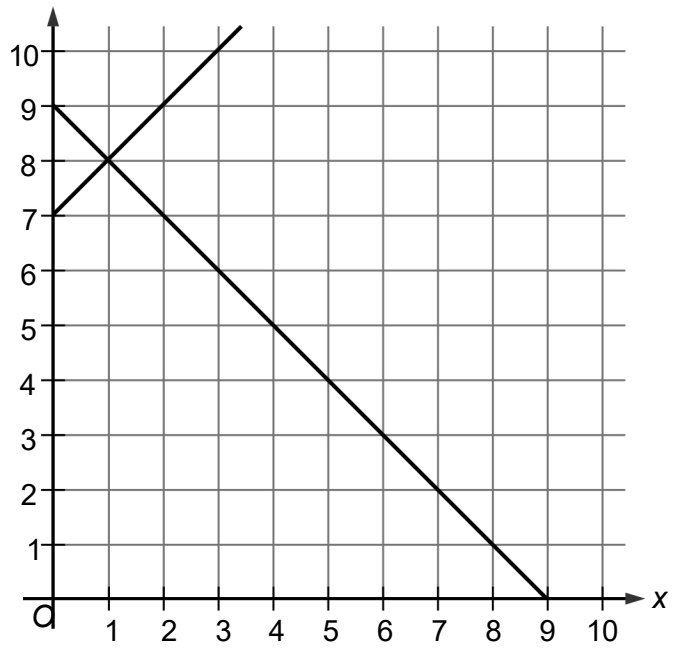

- The 2 lines intersect at 1 point.

B

- For the first line in the system:
  - The line slants gradually down from left to right.
  - The line passes through the following points:
    - (0 comma 9)
    - (6 comma 3)
    - (9 comma 0)
- For the second line in the system:
  - The line slants gradually down from left to right.
  - The line passes through the following points:
    - (0 comma StartFraction 15 Over 2 EndFraction)
    - (6 comma 3)
    - (10 comma 0)
- The 2 lines intersect at 1 point.

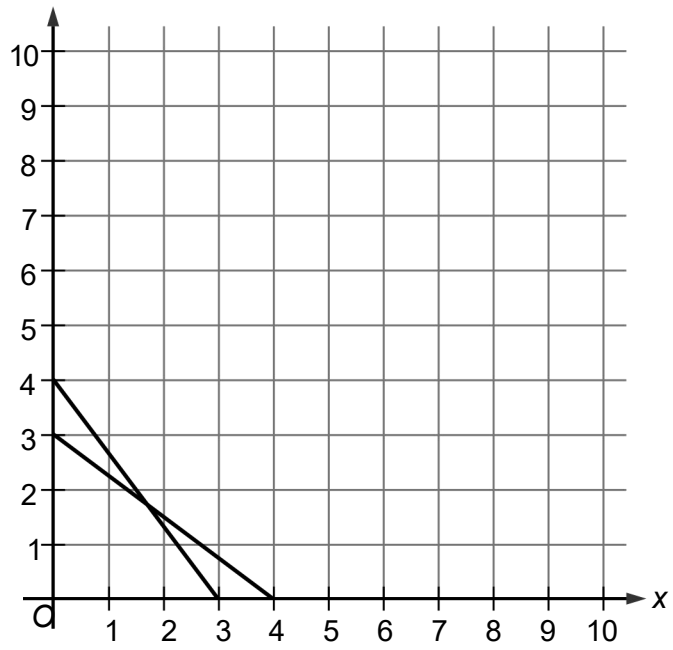

C

- For the first line in the system:
  - The line slants gradually down from left to right.
  - The line passes through the following points:
    - (0 comma 9)
    - (1 comma 8)
    - (9 comma 0)
- For the second line in the system:
  - The line slants gradually up from left to right.
  - The line passes through the following points:
    - (0 comma 7)
    - (1 comma 8)
    - (3 comma 10)
- The 2 lines intersect at 1 point.

D

www.dsatuz.com

- For the first line in the system:
  - The line slants sharply down from left to right.
  - The line passes through the following points:
    - (0 comma 4)
    - (StartFraction 12 Over 7 EndFraction comma StartFraction 12 Over 7 EndFraction)
    - (3 comma 0)
- For the second line in the system:
  - The line slants gradually down from left to right.
  - The line passes through the following points:
    - (0 comma 3)
    - (StartFraction 12 Over 7 EndFraction comma StartFraction 12 Over 7 EndFraction)
    - (4 comma 0)
- The 2 lines intersect at 1 point.

正确答案: B

题目 400 - Section 2, Module 2: Math (hard)

According to a model, the estimated volume of a certain Douglas fir tree increases by 14.9% for every increase of 100 centimeters in the tree's height. The equation $y = ab^{\frac{x}{100}}$ represents this model, where y represents the estimated volume, in cubic centimeters, of this Douglas fir tree, x represents the tree's height, in centimeters, and a and b are constants. In this equation, what is the value of b?

A 0.149

B 1

C 1.149

D 14.9
